SIMCO

DRESS IT WITH A SIMCO HOUSING

The housing for an instrument or product is an integral part of its design, playing a key role in its looks, presentation, value and quality perception. It should compliment and enhance the product in every possible way.
Success of a new or redesigned product depends not only on the purpose, function, and reliability of the product, but on the aesthetics as well. The enclosure that houses a product is its first (visual) introduction. That is why its important to choose an enclosure that creates and projects the right image for both the product and the company it represents.
The beauty and durability of molded ABS are qualities that are appreciated by today's consumer. SIMCO enclosures are manufactured using only the finest grades of material and are molded to strict specifications. Our enclosures are rugged, yet attractive. They can be found in many diverse applications, such as test, measurement, instrumentation, medical, communications and consumer markets to name a few.
In addition, SIMCO provides off-the-shelf inventory, short lead times, and on-time delivery. That is why more and more companies are using SIMCO enclosures. The prices are right. The quality is high. These advantages make SIMCO enclosures the smart and most logical choice for all your enclosure needs – from prototype to production.

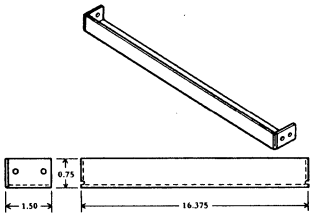
MA-1.5 MOUNTING ANGLE



The Mounting Angle is used to attach card guides and other interior parts when a full-length, -height, or -width platform is not required or would impede the flow of cooling air. It also adds torsional stiffness to chassis used in extremely demanding environments.

Each heavy-duty MA-1.5 is made of 0.090"-thick, clear-iridited aluminum, and is supplied with captive attachment hardware. It is an "L"-shaped solid which mounts to pre-drilled chassis holes in any of four useful orientations.

Order SB9-, SB12-, and SB19-Series parts from this table. Parts in each column mate with others of the same depth.

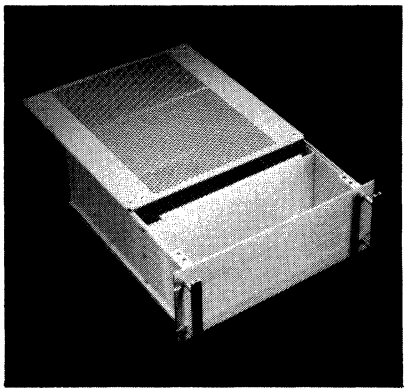
SRK/CRK series

Seven-eighths-spacing Rack-mounting Kits

Stocked for one-day shipping in your choice of 28 combinations of seven heights and four front-to-back depths, and with 7/8" vertical and 1/2" horizontal hole pattern, this SRK/CRK line of chassis drawers can be assembled in a vast variety of configurations without special hole drilling or punching. Double bends in side frame flanges & heavy-duty alumalloy materials make them extra sturdy. Order today, and they're on their way to you tomorrow! Phone toll-free number below and request your free full-color SRK/CRK catalog, which includes slides, card cages and many other mounting accesories.

SRK Kits and Parts

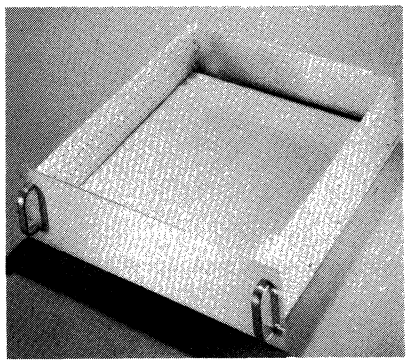


A basic SRK kit is ordered by adding dash numbers for any of seven heights and four depths. The kit will consist of one FP Front Panel; two OSH Oval-Section Handles, [clear or black anodized]; two SF-SE Side Frames with Seven-eighths-inch [vert-spacing] hole pattern; two HMP Heavy-duty Mounting Panels [one for use as a rear panel, the other as an internal mounting panel]; two PANC Perforated Aluminum Non-sliding Covers [top/bottom]; and all assembly hardware. Bottom-hinged front panels, card cages, full-bottom plates & thousands of other variations of parts and accessories can be ordered by adding dash numbers; or for even wider varieties & more combinations, order by individual part numbers from our incredible inventory.

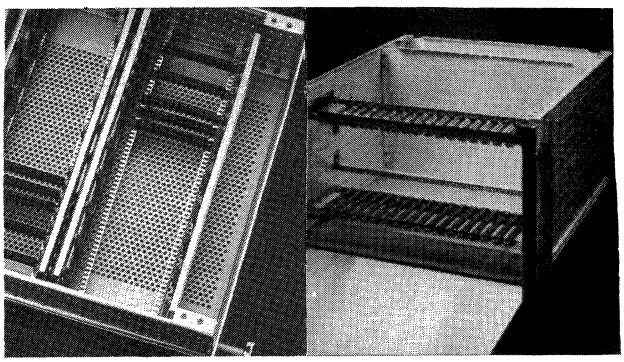
CRK Kits and Parts

A basic CRK kit consists of one FP Front Panel, which like the SRK line is notched for assembling to tapped rails of rack; two OSH Oval Section Handles, clear anodized; two SF-SE Side Frames with Seven-eighths vert-spaced hole pattern; one HMP Heavy-Duty Mounting Panel [for use as rear panel]; one FBP Full-Bottom Plate for use as a chassis base, and captive nuts [pre-installed]. All parts except handles are clear-chem-filmed [clear iridited]. All assembly hardware included.

As with the SRK line, thousands of options can be ordered by the use of dash numbers. For example, use kit number CRK-8H-15D to obtain the kit for the assembly shown at right.



QCC Card Cage Kits and Parts



One of the most popular series of auxiliary parts of the SRK/CRK line are these QCC Quarter-inch Card Cage kits & parts with .25-inch pitch. They include connector rails which will acommodate almost any card connectors & backplanes, guide frames and snap-in card guides in your choice of three guide lengths: 3.15", 4.65" and 6.15". They assemble for front, back, top or bottom loading. Because the assembly method permits much variability, a large selection of card lengths and widths can be accommodated.

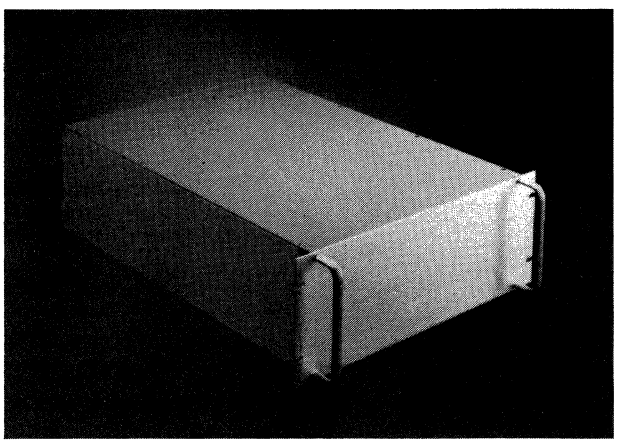
BKCD series
BasiKit Chassis Drawer

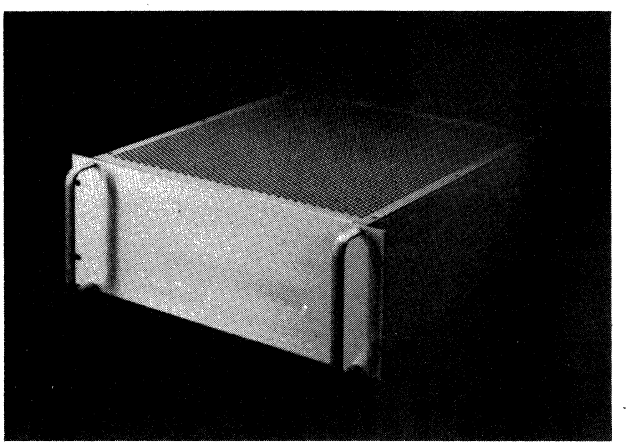
We Are Proud to Introduce the most recent member of the Techmar family of product lines: the BasiKit Chassis Drawer. This new enclosure line is the result of feedback from our customers, who have asked us to design a simpler and more economical packaging system. The BasiKit is just that, and more... it offers the same quality of design and materials, ease of assembly, strength and flexibility as all of our other products. And it is even less expensive, because we designed it to be exactly what it implies: BASIC. These sturdy aluminum kits include the standard EIA-notched, .125" thick horizontal-grained front panel; two side panels available from stock with or without rows of assembly holes, so you can either drill your own right where you want them or utilize our pre-punched hole pattern; a rear panel of .090 thick heavy-duty alumalloy, with no flanges (for easy machining) and with six mounting holes for assembly to side panels and covers for added stability; top and bottom covers are .063 thick alumalloy, available from stock with or without an all-over perforated hole pattern—the solid cover is less expensive, and many customers prefer to punch their own slots or holes in the areas where cooling is needed. Extra sturdy .090 CHASSIS BASES (solid alumalloy bottom plates) also available from stock. Each kit includes two satin-grained oval-section handles, finished in either clear or black anodize; they are cost-effective, functional and attractive. All kits and parts include assembly hardware.



Kit shown above: **BK-7H-18D** with solid side panels (no assy. hole rows), solid top/bottom covers (no perforations), standard EIA front panel, heavy-duty rear panel (no flanges), & clear-anodized oval-section handles.

Kit shown at right: **BK-8H-24D-WHR-2PC** With Hole Rows in side panels, and Two Perforated Covers.

15 Combinations in Stock for Same or Next Day Shipping: 3, 5, 7, 8 & 10" nom. heights; 12, 18 & 24" nom. depths.



Or you may choose to ORDER A LA CARTE BY INDIVIDUAL PART NUMBERS for an even wider range of designs and configurations.

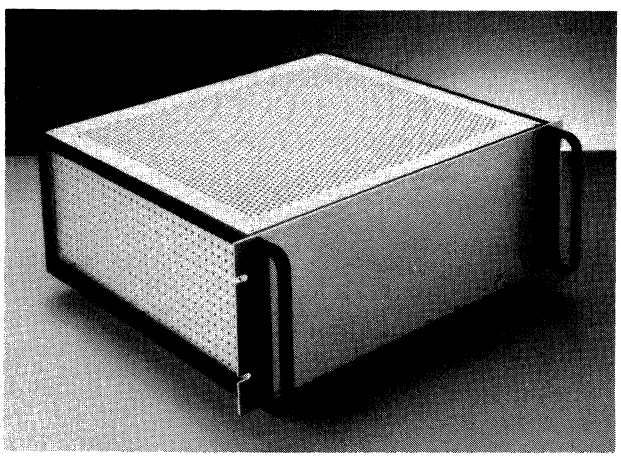
VCD series
Variable Chassis Drawer

V for VARIABLE: VCDs can be assembled into even more thousands of configurations than any of Techmar's previous widely used enclosure lines.

CD for CHASSIS DRAWERS: VCDs are for assembly in EIA racks and rack cabinets. Among many new design improvements:

- Assembly-hole pattern is on 7/16" centers both vertically and horizontally, 1/4 of the EIA height increment.
  FOR YOUR CONVENIENCE: This 90-degree symmetry allows you to mount card cages for front, rear, top or bottom loading, without having to drill special holes, while retaining Techmar's long-time previous hole pattern's advantage of regularizing the locatability of internal parts relative to tops, bottoms & centers of your chassis drawers. And the new hole patterns give you the help of smaller pitches for locating internal parts.
- Your choice of color combinations: all clear [silver], clear/black or all black.
- You can machine your mounting surfaces in the flat before you asemble edge-stiffeners.
- Convertibility between VCD rackmount and VSA stand-alone models for benchtop applications. [see below].
- General purpose card cages, slides and many other mounting accessories available.



VCD Kits

If you order a standard kit by height, depth and color but no other dash or dot numbers, you will receive the parts & hardware for an assembly which includes a 12-piece frame of extrusions, standard front panel, handles, structural side panels with assembly-hole pattern, top/bottom perforated covers, & outside back panel, all in whatever color combination you specify. By adding a dot SC, you also receive Side Covers to hide the assembly holes and screwheads on the side panels. Some of the thousands of other kit options ready for immediate shipment are shown in our catalog, including the much larger number of configurations that are available to you whether you choose to order as kits or as individual parts.

VSA series
Variable StandAlones

This is an exceptionally sturdy and decorative enclosure line for benchtop/desktop instrumentation. Its parts are the same as for a VCD kit of the same height, depth and colors, with the following exceptions: The front panel is normally 17 wide and recessed instead of 19 wide; handles are backed by spacers instead of panel ears; side covers & rubber feet are included; one-third perforated covers are standard unless otherwise specified. And as with the VCD line, you can choose from a large variety of options & accessories, including card cages & other internal mounting parts. TRACEWELL

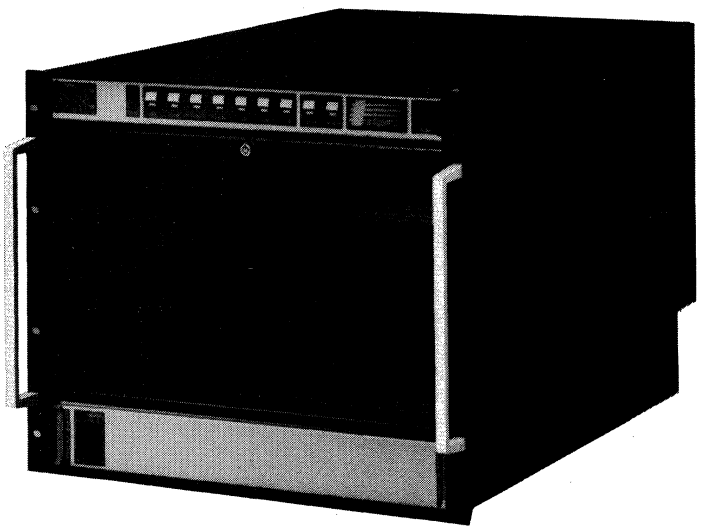
BUS Packaging Systems and Electronic Enclosures

• OVER 19 YEARS OF ELECTRONIC PACKAGING EXPERIENCE •

System 90 VXI Intelligent main frame



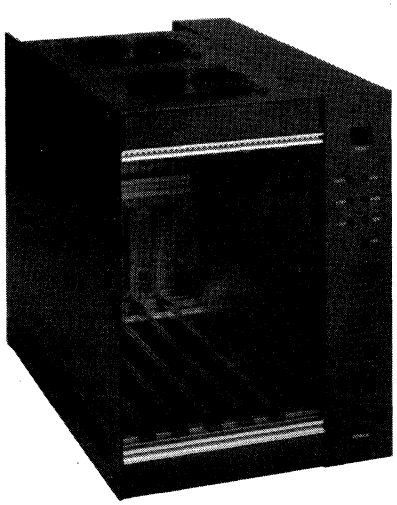
System 90 series intelligent VXI mainframes introduce a revolutionary approach to computer systems packaging technology that safeguards your VXI modules.

VXI mainframes demand tight control of power supply outputs, cooling performance and enclosure construction techniques to ensure the proper operating environment for your instrumentation modules.

Tracewell System 90 series intelligent mainframe supervisory panel scans all power supply outputs, the air flow sensor and standby battery for out of specification conditions. Detection of a fault condition triggers both visual and audible alarms alerting system operators.

System 90 series intelligent mainframes, available in both C and D sizes, are an active component of your overall VXI instrumentation system providing both the OEM and end-user with the leading "edge" in packaging technology.

System 24 VXI/VME



System 24 VME/VXI development system enclosures are designed for testing hardware and software, provide full access to the backplane and power supply outputs. Forced air cooling permits boards and modules to be tested under operating conditions.

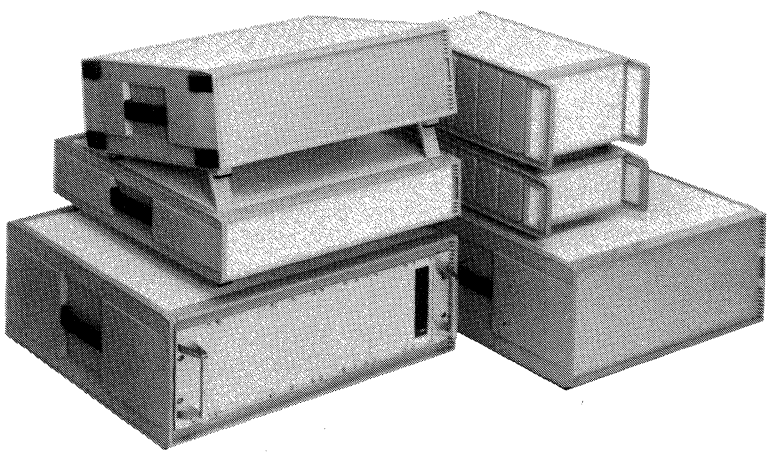
The other four come in two standard depths: 12 inches and 19 inches. Custom depths for any CH model are available. The precision die cast aluminum handles act as structural members and also as EIA mounting brackets. The front panel can be removed when the enclosure is mounted in a rack. Four extruded aluminum mounting rails connect the sides together. Permitting the top, bottom, front, and rear panels to be removed, while leaving the sub-assembly intact. The top and bottom covers are available in either solid or perforated styles and remove easily with quarter-turn fasteners. Mounting holes on the CH sides are 1 inch OC vertically and .5 inches OC in the horizontal direction.

Die Cast Aluminum Enclosures



The R and SR enclosures use precision aluminum die castings for ruggedness as well as function and appearance. Unique construction techniques conceal the fasteners, yet provide easy access to the interior.

The R and SR series to enclosures can be used as stand-alone or as rack-mounted units. They are available in full EIA 19 inch rack and half-rack sizes.

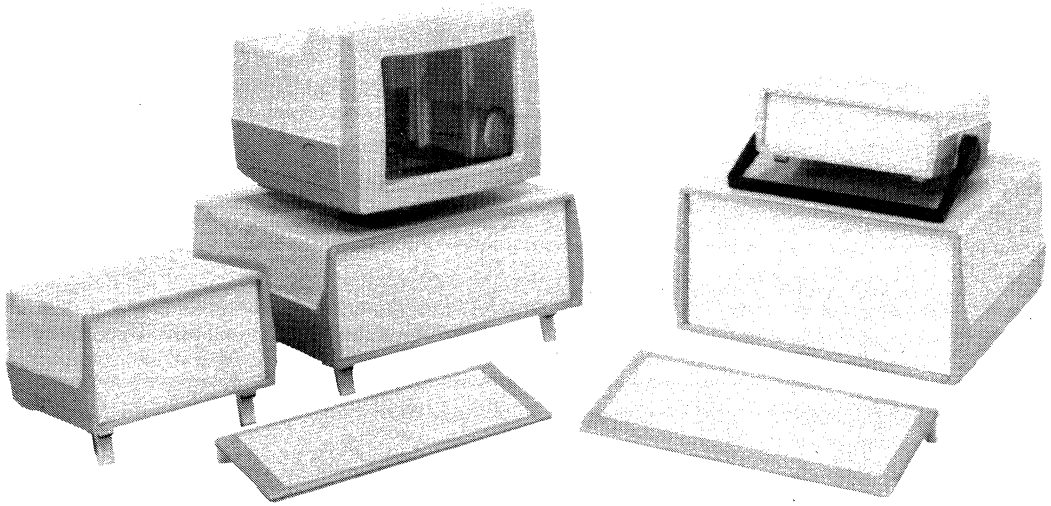
Injection Molded Electronic Enclosures



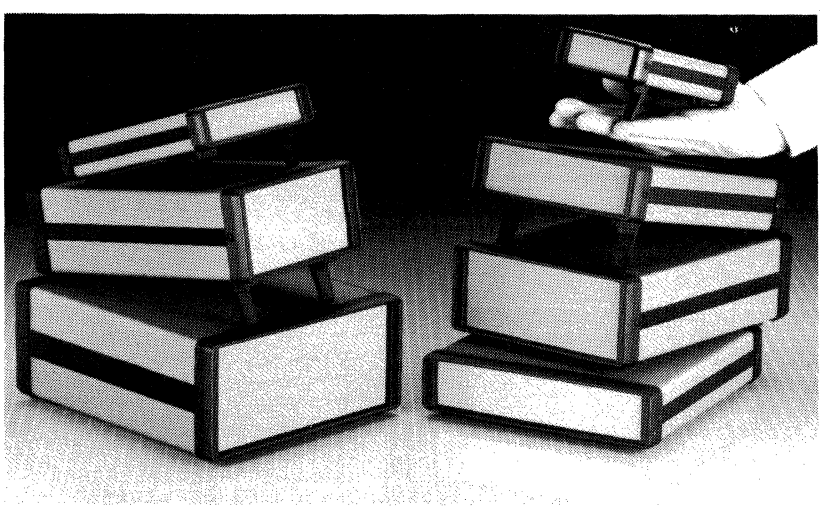
The NC series is a complete line of electronic enclosures designed for the large systems, small peripherals, adjustable CRTs, low-profile keyboards, and CPU-type housings in either vertical or horizontal configuration.

NC enclosures feature sophisticated engineering and quality construction. Manufactured from injection-molded, glass-reinforced polycarbonate, this material is rated V-O in UL flammability tests. This material supplies the greater rigidity and strength needed when packaging electromechanical systems.

The exterior finish on the NC line of enclosures is a marresistant, two-coat textured polyurethane.

The NC line also features over-lapping joints, grounding brackets and vent openings with the proper EMI slot geometry. Optional EMI shielding of plated nickel over copper provides excellent EMI suppression.

Small Aluminum Enclosures



The SL series is available in seven models, from 3.5"W x .97"H x 3.7"D to 7.46"W x 3"H x 8"D. This series is constructed using extruded aluminum sides with PC grooves, aluminum front and rear panels, vinyl clad aluminum top and bottom covers. The bezels are injection molded polycarbonate. Pull down feet are standard. Options include: Chassis plate, mounting bracket and belt clip.

MINIGLOSSARY ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise*. The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.

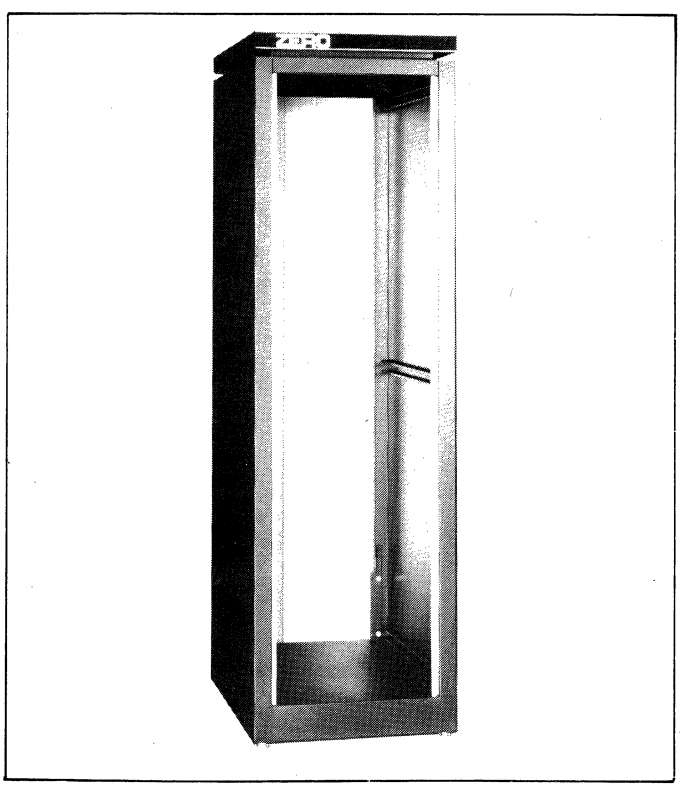
The standard Series 101 includes a basic frame, two lift-off side panels, your choice of a flush or pagoda top, a surface-mounted auxiliary hinged rear door with magnetic latch, four leveling feet, and *two* mounting rails. Extra sets of mounting rails are available as an option.

Side panels and rear doors are painted with a light beige baked, textured finish. Tops and frame are black. Other colors are available on special order.



In quantity orders, **Series 404** is the most economical Matrix IV cabinet and is ideally suited to applications that do not require lateral enclosure access. For high strength and rigidity, the space-saving Series 404 uses side panels that function as stationary frame members.

The standard Series 404 cabinets consist of a basic frame, your choice of a flush or pagoda top, a surface-mounted auxiliary hinged rear door with magnetic latch, four leveling feet, and two mounting rails. Extra sets of mounting rails are available as an option.

Cabinet frame and top are painted black. Rear door is painted with a light beige baked, textured finish. Other colors are available on special order.

DESCRIPTIONS OF PAINTS LISTED ABOVE

4c SERIES OF GOLD CONTACT REPLACEMENTS

May be carried as a shirt pocket kit for field repair of worn or defective gold plated contacts or to upgrade base metal contacts. It is applied in seconds as part of normal trouble shooting procedure. Each $83, shirt pocket kit for electronic field service representatives can save over $3520 in reduced board float, call-backs, and preventative maintenance.

May also be applied on original equipment contacts by production methods. There is no need for electroplating equipment, chemical disposal, or product design changes except for the elimination of gold plating and the substitution of a 4c material by far simpler application methods which may include brushing, dipping, spraying, or banding. Even electronic and electrical battery-operated games and toys can have the dependability of gold without the cost.

These 4c gold substitutes offer one of the most effective technologies available to increase reliability in two areas: A — Reducing the cost and consumer irritation of servicing the millions of your products already in the field, and, B — By adding them to your future production, assure maximum reliability and the reputation that results from reduced manufacturing costs and reduced field repairs. SHIELDING LARGE STRUCTURES FROM ELECTROMAGNETIC INTERFERENCE (EMI)

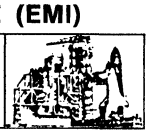
New Shielding Method:
Reduces cost up to 80%
Reduces time 90% to 95%
Simplifies planning
Stands rough treatment

NR2HF is in the space program



The WORRY-FREE shielding for a building, a cabinet, or a phonograph cartridge.

The new NR2HF synthetic rubber shielding combines the three KEY advantages of, 1 — Fast, low cost application by painting, 2 — Very high shielding effectiveness (up to 90 dB) and, 3 — Ability to survive warping, building settling, vibration, and shock that would crack prevous shielding paint or open the seams of metal enclosures. It is INSURANCE against FUTURE problems. Applied quickly in production or in the field by spray, roller, brush, or dip. Samples available to shielding consultants and to potential shielding users. CPA SERIES OF CONDUCTIVE ADHESIVES

These new circuit assembly materials provide a fundamentally new approach to simplifying a wide range of electrical connections such as surface mounted components, simplified connectors, and elimination of mechanical fasteners. For example, a pocket radio or TV set or wrist watch or washing machine or auto dash board circuitry can be designed to be assembled with far fewer parts and assembly operations. Surface mounted circuit board manufacture using the new Micro-Circuits assembly methods eliminates seven out of eight major items of assembly equipment and 57 of the 72 areas of cost that now limit acceptance of surface mounting. Like the 4c materials above, these products offer one of the most powerful new technologies now available for simplifying and miniaturizing electronic products. FREE DATA

AIRCRAFT ANTISTATIC AND RAIN EROSION RESISTANT PAINT

RSE100 paint is used for radomes and antenna covers. Used world-wide for over 20 years. One of our most goof-proof products. May be overcoated with decorative aircraft paints if our RA2 Antistatic Additive is mixed into the decorative paint to prevent static puncture damage and loss of antistatic effectiveness. RSE100 is very abrasion and chemical resistant as an antistatic flooring. May be overcoated with conventional floor coatings containing RA2 Antistatic Additive. RSE22 is similar to RSE100 but has a resistance of less than 200 ohms for shielding, ground planes on boat hulls, etc. FREE DATA

STATIC ELECTRICITY PROTECTION

Static electricity protection is becoming critically important in sensitive equipment, computer rooms, electronic warehouses, assembly lines and assembly benches, many hospital areas, chemical processing plants, and similar areas. The RSE100 Antistatic paint (see above) may be used on floors, walls, tables, furniture, etc. The RA2 Antistatic Additive (see above) permits the use of decorative, protective, and color-coding where such paints would previously have caused static problems. SC12, SC13. SC20, AND SC15 SILVER PAINTS

These are conductive silver paints and inks used to form "wires", electromagnetic shielding, cold soldering of fine wires, reversing contacts on recording tape, conductive areas on paper and plastic parts, adjusting resistors, coils, capacitors, and pots. They have been used by magicians and to indicate fracture of rocks and aircraft parts. SC20 is for human skin electrodes. FREE DATA

NYE Designer Lubricants ELECTRIC CONTACT LUBRICANTS NYE Designer Lubricants

Lubricants are insulators. When one is faced with the need to lubricate an electrical contact, a first reaction might be that an electrically conductive material is needed. This is not the case. The thin films in which contact lubricants do their job leave plenty of room for metal-to-metal contact and current flow; or, if a lube film remains, it is sufficiently thin that current can be transmitted by a phenomenon called the "tunnel effect."

Switch Contact Greases

Greases for lubrication of sliding electrical contacts, as in electric switches, should have the same qualities as required for straightforward mechanical sliding: good film strength, appropriate high and low temperature fluid range and 'stay-in-place' capability. These greases are relatively 'additive-clean' to simplify the chemistry of grease degradation, which will inevitably occur if there is arcing in the lubricant's presence. Butt contacts, where no sliding takes place, are best left unlubricated.

Product	Temperature Range, °F	Characteristics
Rheolube 362	-65 to 250	Light, synthetic hydrocarbon-based grease for wide temperature applications.
NyoGel® 782D	-10 to 200	Non-melting polyether gel which degrades to volatiles with arcing.
Instrument Grease 737	-65 to 225	Light, synthetic hydrocarbon-grease for automotive instrumentation. Resists salt-water.
Rheolube 789DM	-40 to 300	Non-melting, polyol ester-based grease for higher temperature switch needs.
NyoGel® 760D	-20 to 250	Synthetic hydrocarbon-based heavy gel for distribution switchgear.

Potentiometer Lubricants

A potentiometer is a variable resistor, usually with low voltage and very low current; arcing is not likely. A sliding electrical contact is inherently involved. Oils and light greases based on synthetic esters have shown good performance, especially in wire-wound potentiometers. With many newer designs, using unusual material combinations, such as metal wipers on a conductive plastic or ceramic-metal matrix, special silicone formulations have provided the only workable solutions, especially when very low or very high operating temperatures are encountered.

Product	Temperature Range, °F	Characteristics
Synthetic Oil 203	-65 to 250	Polyol ester contact oil with additives for wire-wound pots.
Fluoroether Grease 833B	-40 to 300	Wide temperature fluoroalkyl polyether grease with resistance to fuels and solvents.
Rheolube 799	-65 to 250	Light polyol ester-based grease with lubricity additives.
Fluorocarbon Gel 813	-100 to 400	Soft, non-melting silicone grease for extreme temperature needs.

Electrical Connector Lubricants

For stationary separable electric contacts, or connectors, the purpose of a lubricant is to reduce wear from repeated insertions and withdrawals and, equally important, to prevent tarnish of a pollution-vulnerable contact surface. Heavy oils applied from dilute solutions in selected solvents are used on noble-metal connectors. Where fretting corrosion occurs, as may happen with tin-lead, a relatively thick film of thixotropic grease has proved useful. The 500-series products listed below are applied from volatile solvent dispersions.

Product	Characteristics
NyeTact 512	Complex formulation for porous gold contacts to prevent substrate corrosion.
Synthetic Oil 438 Synthetic Oil 439	5-Ring and 6-Ring polyphenyl ether oils each available in a variety of dispersions.
Synthetic Oil 174A NyeTact 517	Oil/solvent dispersion based on synthetic hydrocarbons providing thin protective film.
NyoGel® 759G NyeTact 502	Soft, thixotropic synthetic grease/dispersion for tin-lead/fretting corrosion problems.

Damping Greases

"Controlled-shear" gels or damping greases are frequently used to reduce free motion and to quiet operating noise of loosely-fitting components in electro-mechanical devices, including the mechanical elements of electrical switches and potentiometers. These greases work as "motion-control compounds" where damping of free motion is needed. They have proved especially useful on the shafts of hand-operated potentiometers where they can provide a "velvet feel" and can eliminate coasting. They are all tacky or adhesive to a greater or lesser degree.

NyeBar® Barrier Films to prevent oil creep

Certain types of electrical contacts must be protected from lubricant films. Examples are the relay contacts of telephone systems or butt contacts where no sliding occurs during actuation. The NyeBar barrier films are fluorinated polymers applied from very dilute solvent solutions which, by covering a surface with an ultra-thin film of extremely low surface energy, can render that surface non-wettable by oils or other fluids. Oil creep from nearby lubricated areas can be controlled or eliminated. Current flow and signal integrity are not affected by the presence of a very thin NyeBar film.

Send details of your product application and a sample of a recommended lubricant will be sent at no charge. Write for Nye's 12-page summary catalog describing specialty products for electrical contacts.

Altech's two-piece, pluggable printed circuit board terminal blocks speed and simplify the process of board replacement, reducing costly downtime and eliminating wiring mistakes. One-piece precision molded construction with high mechanical strength, and a double beam contact design ensure the highest possible number of mating cycles and minimum contact resistance.

Our pluggables are readily compatible with other industry-standard plug and header designs and meet worldwide standards. They are available with 2 to 24 pole configurations and have received electrical ratings of 300V, 15A, 22-12 AWG.

Altech's Pluggable Terminal Blocks ensure a reliable connection...every time.

Funnel shaped entry guides facilitate connection of stranded wires.

Screw-cage clamp provides gas-tight, vibration-proof wire connection.

Closed-end headers eliminate possible damage and short circuits due to misplugging.

A system to connect to

Altech's industry standard terminal blocks deliver high density, dead-front safety and increased flexibility to make your product more competitive. Our comprehensive terminal block line includes fixed and pluggable printed circuit board mini-terminals, DIN rail and modular panel mount blocks, tubular screw Eurostrips, interface and electronic modules and terminal block accessories. If you are seeking the optimum solution for your wire termination requirements, give Altech a try.

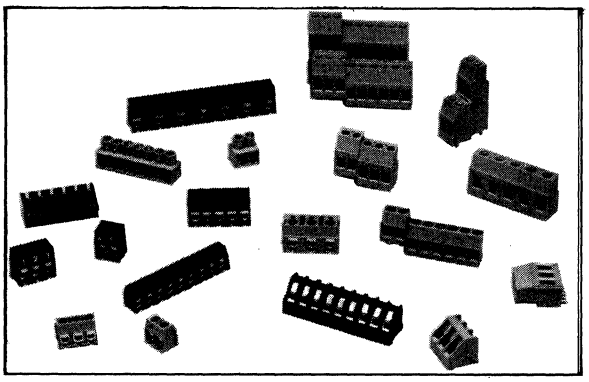
PRINTED CIRCUIT BOARD TERMINAL BLOCKS - FIXED



Use the screw-cage clamp design for industrial applications where frequent wire terminations occur. Or use the cost effective tubular screw clamp design for commercial or industrial applications where infrequent wire terminations are expected. Both provide modern, reliable wire termination. Modularity provides the flexibility to create multipole assemblies from 2 and 3 pole modules, simplifying ordering and minimizing inventory. Order as single modules or preassembled.

DIN RAIL MOUNT TERMINAL BLOCKS

Altech's DIN rail mount terminal blocks combine multiple functions on a standard rail, enhancing design capabilities, saving space and reducing installation time. Screw-cage clamps increase efficiency and reliability.

- Feed-Through, Multi-Level, Ground
- Disconnect, Fuse, Thermocouple
- Assemblies for 15, 32, 35mm DIN Rail

The standard terminal blocks feature a universal foot for 35mm or 32mm DIN rails. They are designed for high density, industrial use. Material: polyamide 6.6; up to 600A, 600V. Screw-cage clamp wire termination. UL, CSA and IEC/VDE. Dead front construction prevents dangerous electrical shocks and damaging shorts.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

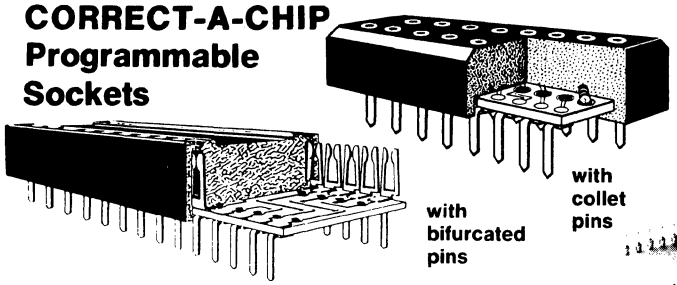
CORRECT-A-CHIP Programmable Sockets



with bifurcated pins

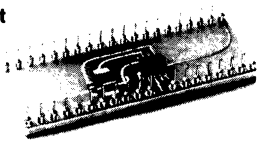
with collet pins

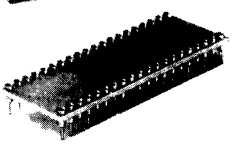
Circuit paths can be re-routed using the Aries Correct-A-Chip technology. The miniature printed circuit board inside the Correct-A-Chip provides circuit paths making the desired electrical connections and has high reliability collet contacts to accept devices and solder tail contacts for board insertion. Correct-A-Chip technology solves problems such as the need to use alternate IC's (availability, obsolescence or better performance, etc.) thus eliminating the need for new p.c. boards, jumper wires, cut traces or other alternatives. Full utilization of Correct-A-Chip technology may also incorporate both surface mount active and passive devices thus using available real estate to maximum advantage. The Correct-A-Chip is available with stamped pin or high reliability collet sockets.

Features:

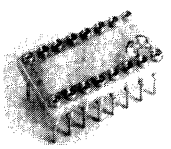
- **Available in standard sizes 14, 16, 18, 20, 24 and 28 pin on .300 (7,62) centers. (.600 [15,24] centers: consult factory.)**
- **Low profile — only .223 (5,66) height to seating plane.**
- **High reliability, redundant gold plated collet contacts or gold plated stamped contacts.**
- **Tin plated solder tails.**
- **Programmed to your wire list. . . fast.**
- **Tamper proof.**
- **Worksheet on page 38 of Aries Catalog can be used for programming your Correct-A-Chip requirement.**

Enhanced Sockets Correct-A-Chip™ Specials

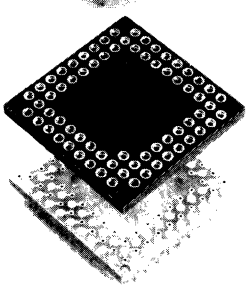




This special is a 40 pin collet socket, with a surface mount 7705 integrated circuit plus two surface mount resistors plus two capacitors all mounted on the socket. The effect of all this is that the socket becomes a hybrid, which is actually a reset monitor which constantly checks to make sure there is a minimum voltage to the microprocessor that will be plugged into the 40 pin socket. Although this was a special, designed for a specific application, it is quite possible that another customer may need to do the exact same thing. The Aries part number for this is 1107939.

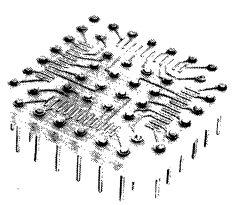


High-Voltage Transient Protection is incorporated into this special Aries Correct-A-Chip. DIP and SIP sockets easily lend themselves to this technology incorporating surface mount devices. In the sample shown transient suppressors have been surface mounted to protect 1488 or 89 IC from high voltage blow-out. The new Correct-A-Chip socket is retrofitable after a blow-out has occurred thus preventing future loss of 1488 or 89 IC's.

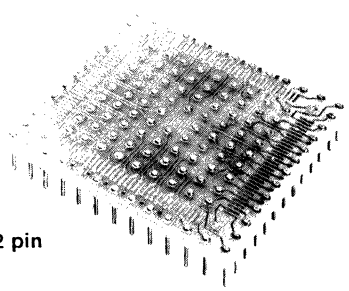


Pin Grid Array Adaptors using the Correct-A-Chip technology are solving many problems of IC pin/out incompatibility.

PQFP To PGA .025 (0,63) PITCH ADAPTORS



44 pin

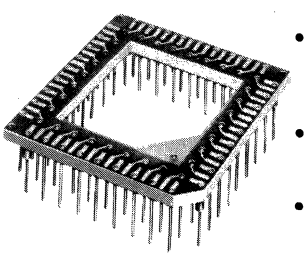


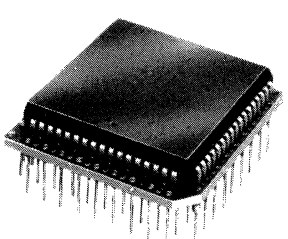
132 pin

PQFP To PGA .025 (0,63) PITCH ADAPTORS

PQFP devices can be converted to PGA footprints using these precision adaptors. .062 (1,57) FR-4 material is used for the body. Pins are 60/40 S_N P_b plated Brass. Both 44 pin and 132 pin count versions are available. Consult factory for other sizes.

Adaptors for JEDEC (.050" pitch) CHIP CARRIERS (Leaded Type A)





- Your present PLCC devices can be used in through-hole applications by soldering to Aries adaptors.
- Standard JEDEC footprints are converted to PGA footprints.
- P.C. boards have more space for conductor runs when converted to .100 spacing.
- Polarization option available.
- Standard test clip can be used.
- Body of adaptors is copper clad FR-4, solder plated.
- Pins are brass, tin/lead plated.

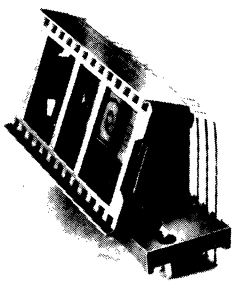
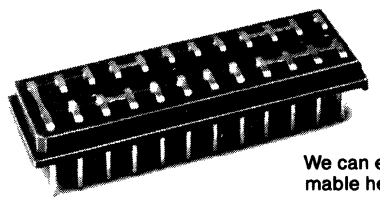
Bring Your *SPECIAL REQUIREMENTS* to Aries

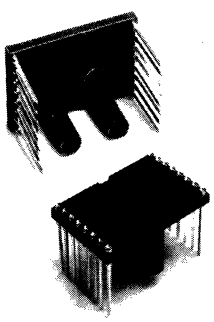
Aries is well known for its ability to fulfill special needs of customers. We can adapt or modify existing products or come up with entirely new designs incorporating one or many techniques, materials or production methods. Illustrated on this page are just a few "specials" that have solved problems for our customers. Our advantage is being able to see your problem with a fresh look...and then with good, experienced engineering capability...come up with a solution...quickly. If you need fast answers—don't hesitate—come to Aries.



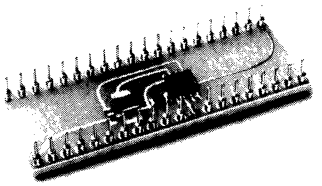
This customer needed a 26 pin on .600 socket that would 1) solder into the board on .300 centers, 2) elevate the display up off the board, and 3) tilt the display at a 70 degree angle so that it could precisely fit against the display window.



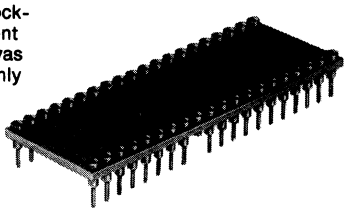
We can even combine a programmable header with a DIP header.

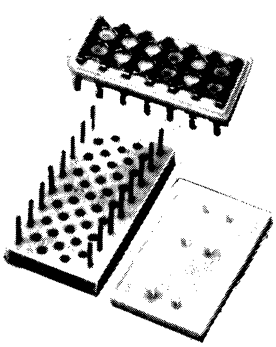


The customer had a very congested board, from which a display had to be elevated. The special display socket they wanted us to design had to have "feet" to hold the socket in position until the board went through soldering. The board was so congested that there were only three small areas where these "feet" could be located.

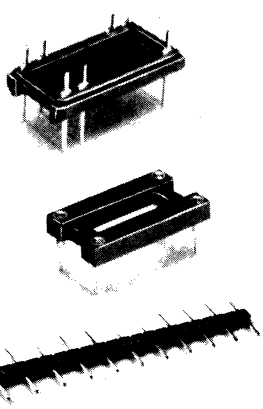


This special is a 40 pin collet socket, with a surface mount 7705 integrated circuit plus two surface mount resistors plus two capacitors all mounted on the socket. The effect of all this is that the socket becomes a hybrid, which is actually a reset monitor which constantly checks to make sure there is a minimum voltage to the microprocessor that will be plugged into the 40 pin socket. Although this was a special, designed for a specific application, it is quite possible that another customer may need to do the exact same thing. The Aries part number for this is 1107939.

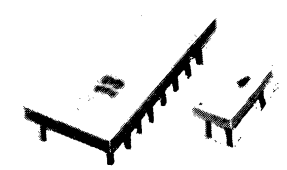




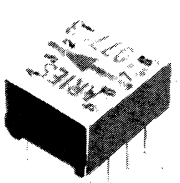
One customer needed a programmable device, similar to a 680 programmable header, with standard DIP pins on the bottom, but with *three* metal straps running lengthwise down the adjacent connection rows. This configuration allows a larger number of programming "permutations". This application was further complicated by the need for the device to be extremely thin—so thin that on initial designs, the pointed ends of the programming punch would crack the thin plastic after breaking the metal strap. A difficult plastic molding, which produced a hole under each one of the possible places that the metal straps could be broken, solved the problem.



One of the most common requests is to selectively load the pins on a catalog part number. Pictured here are: a 14- 600-20 post style header, except with only eight pins selectively loaded in the corners; a 23-901-10 tin Squarestix, except with 12 pins selectively loaded in every other position; and a 14-3518-10 open frame collet socket, except with four pins selectively loaded in the corners. Selectively loaded sockets are frequently used for relays.



A very common modification is to take a catalog programmable header, and program it to a specific program. This is a programmed 24-680-190T, and a special 8-680-190T programmed.



We are often asked to take a Series 600 header and do something special with it. In this example, although you can't see it, there is a diode plus a wire soldered inside an 8-600-11, after which we pour in potting compound, seal on an 8-650-10 cover, and mark the cover.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Beau® Barrier Terminal Strips

CONSIDER THE ADVANTAGES OF BEAU THERMOPLASTIC STRIPS

Beau thermoplastic strips offer many significant advantages. The strong, resilient barriers. The quality and uniformity of the product. Our determined commitment to engineering excellence. And, with our large selection, you're sure to find the strip you need.Design in or cross over to Beau thermoplastic strips — the advantage is yours.

BEND BARRIERS WITHOUT BREAKING

Resilient thermoplastic reduces breakage dramatically. Production line and in-field damage are virtually eliminated.

TERMINAL TAILS ENCLOSED

Cavities are eliminated around solder terminal tails. Allows mounting on PCB without affecting circuit isolation. Eliminates entrapment of foreign matter. Reduces solder wicking.

CLOSED-SIDE STRIPS OFFER EXTRA PROTECTION

Closed side serves as a wire stop. Permits mounting components close to strip without shorting. Wires or screwdrivers can't pass through closed side to contact other wires, leads or PCB components.

HIGHEST U.L. RATING

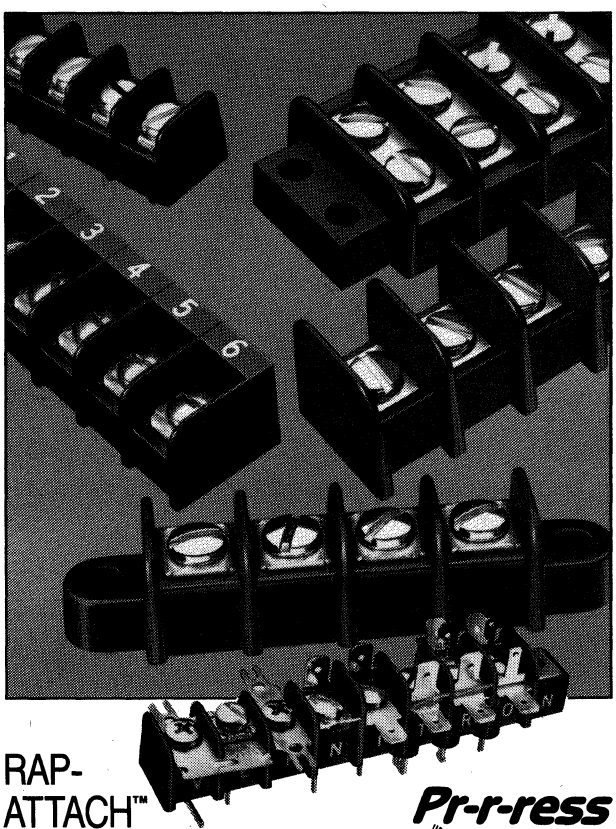
Our thermoplastic materials all carry the highest U.L. flame retardant rating: UL 94V-0 (self-extinguishing).

NEAT, ACCURATE MOUNTING ENDS

All our thermoplastic strips are molded to length. None are cut down from longer strips. They're neater, without ugly saw cuts. And they are precisely the same length every time.

WIDE VARIETY OF TERMINALS

There is a broad selection of top-side and bottom terminals— including quick-connect terminals which speed assembly time, cut costs and improve connections.



RAP-ATTACH™ MOUNTS SAVE 40% OF INSTALLED COST

Rap-Attach mounts (option) are the rapid new way to attach barrier terminal strips to PCBs or panels. Just press in the drive pins. The built-in prongs spread like a blind rivet. It's so easy, you can cut installed cost dramatically.

Non-conductive mounting.
Strain-free joints.
Wave solderable.

MIL-C-5015

GENERAL INFORMATION

BTC's hermetically sealed BA receptacles are designed to accommodate plugs per MIL-C-5015. Their mating dimensions are in accordance with MIL-C-5015 and they meet the environmental and electrical requirements of MIL-C-5015, such as thermal shock, air leakage, salt spray, vibration, physical shock, contact and insulation resistance.

The construction of the receptacles is the "all metal" type, and the hermetic sealing is accomplished by the use of individual pieces of vitreous material around each contact.

The receptacles meet the instrument service rating of MIL-C-5015 (1000 volts ac rms at sea level). Insert arrangements are shown on the following page. The index shows shell size, contacts, contact size and alternate insert positions. Receptacles with higher voltage ratings are available on special order, providing the insert layout will accommodate larger than normal individual glass inserts or if an "all glass" insert is available.

The standard BA receptacles are supplied with eyelet, solder cup and short solder cup contacts. They are supplied less the interfacial seal. Interfacial seals can be supplied upon request.

Various special materials and finishes for shell and contacts, as well as weld-mounts and thermocouple applications, are available.

MIL-C-26482

GENERAL INFORMATION

BTC's hermetically sealed BC and BK receptacles are designed in accordance with MIL-C-26482, series 1 and 2 respectively and are the "quick disconnect" bayonet coupling type. The two series of connectors when intermated meet, the minimum requirements of series I connectors.

The construction of both series of receptacles is the "all glass" type, i.e., the hermetic sealing is accomplished by the use of one single piece of vitreous material.

BTC's standard BC receptacles (MIL-C-26482, series 1) are supplied with interfacial and peripheral seals as shown on pages 8 and 9. An "O" ring seal can be supplied upon request.

BTC's standard BK receptacles (MIL-C-26482, series 2) have a resilient seal bonded to the glass. The raised tapered barriers around each contact of this interfacial seal lock into the lead-in chambers of the plug insert, providing a positive seal between plug and receptacle.

Various special materials and finishes for shell and contacts, as well as weld-mounts and thermocouple applications, are available.

GENERAL INFORMATION

BTC's hermetically sealed BP receptacles are designed in accordance with MIL-C-38999, series III and meet the requirements of this specification.

The BP receptacles are "scoop proof," with a quick disconnect triple start thread, designed so that electrical continuity is maintained between mating shells prior to pin and socket engagement and in reverse order during the disconnecting operation. The plug shells are provided with "grounding fingers" for EMR (Electro Magnetic Radiation) or RFI (Radio Frequency Interference) shielding.

The construction of the receptacles in the "all glass" type. The hermetic sealing is accomplished by the use of one single piece of vitreous material. An interfacial resilient seal is bonded to the glass. The raised tapered barriers around each contact of this interfacial seal lock into the lead-in chamfers of the plug insert and provide a positive seal between plug and receptacle.

High density insert arrangements permit these connectors to have twice the number of contacts than previously available in similar shell sizes.

Various special materials and finishes for shell and contacts, as well as weld-mounts and thermocouple applications, are available.

MIL-C-83723 (SERIES 1)

BTC's hermetically sealed BK receptacles are designed in accordance with MIL-C-38723, series1 and meet all the requirements of this specification.

The BK receptacles have a bayonet coupling mechanism and are intermateable and intermountable with MIL-C-26482, series 1 connectors, and are identical to MIL-C-26482, series 2 receptacles. When intermated with MIL-C-26482, series 1 plugs, the minimum performance requirement for MIL-C-26482, series 1 is met.

The construction of the receptacles in the "all glass" type. The hermetic sealing is accomplished by the use of one single piece of vitreous material. An interfacial resilient seal is bonded to the glass. The raised tapered barriers around each contact of this interfacial seal lock into the lead-in chamfers of the plug insert and provide a positive seal between plug and receptacle.

Various special materials and finishes for shell and contacts, as well as weld-mounts and thermocouple applications, are available.

MIL-C-83723 (SERIES 3)

GENERAL INFORMATION

BTC's hermetically sealed BM and BL receptacles are designed in accordance with MIL-C-83723, series 3, types B and T respectively and meet all the requirements of this specification.

The BM receptacles have a bayonet coupling mechanism are intermateable and intermountable with MIL-C-26500, type B connectors. The BL receptacles have a thread coupling mechanism and are intermateable and intermountable with MIL-C-26500, type T connectors.

The construction of the receptacles in the "all glass" type. The hermetic sealing is accomplished by the use of one single piece of vitreous material. An interfacial resilient seal is bonded to the glass. The raised tapered barriers around each contact of this interfacial seal lock into the lead-in chamfers of the plug insert providing a positive seal between plug and receptacle.

Various special materials and finishes for shell and contacts, as well as weld-mounts and thermocouple applications, are available.

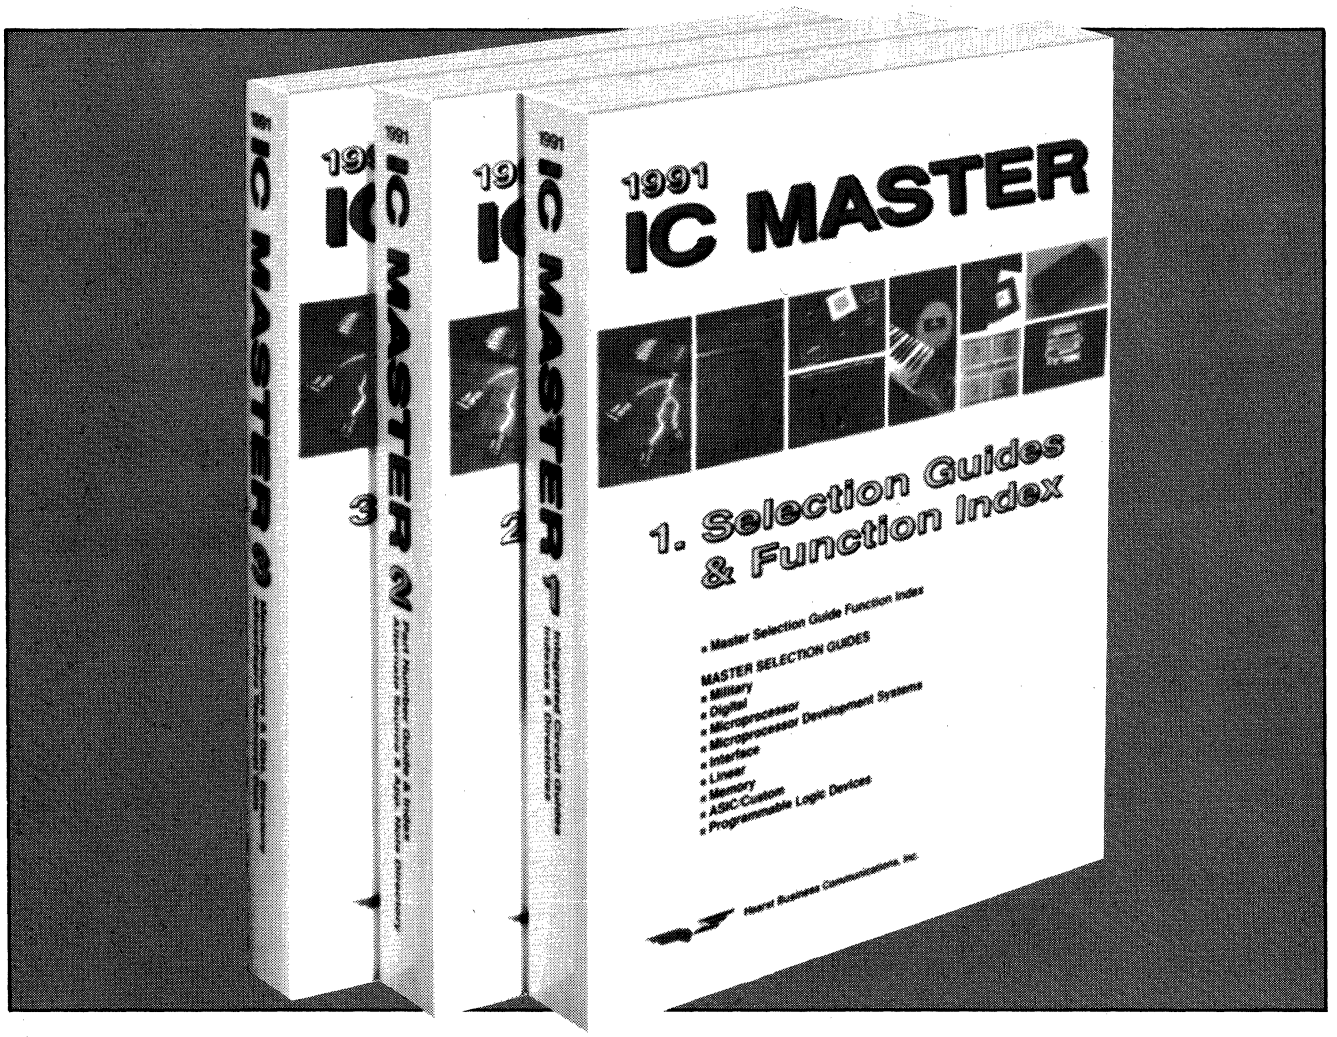
SUPER TIME SAVER!



Do you work with ICs? Do you have trouble finding the IC you need? Are you sick and tired of sifting through dozens of manufacturers' data books? Do you have trouble comparing one set of specs to another? Are you sick and tired of wasting time?

Do we have good news for you! Get your hands on the latest annual copy of the IC Master. The Master will save you both time and money. Here's how.

The Master lists every single IC you can buy. Better yet, the Master lists ICs by function. You know what you want to do. The Master tells you who makes what for what you want to do.

There's more! The Master lists every known alternate source to every integrated circuit. If somebody makes a substitute for an IC, the Master tells you. And fast!

Want to find a custom or semicustom IC? The Master tells you who the manufacturers are, what their capabilities are, and what design tools you need.

Looking for a distributor or a local sales office? The Master tells you where they are. Got a technical problem? The Master tells you who to call. Can't figure out a part number? The Master tells you how the part number systems work.

There's more! The Master has a section on microprocessor development tools with complete performance parameters. There's another section on programmable logic devices giving you everything from output configuration to PLD development systems.

Want to know if there's an application note available on a given part? The Master tells you!

If your question has anything to do with integrated circuits, you need the IC Master. Subscribe now by calling (516) 227-1314. Ask for Marie Botta. Tell Marie you need the Master now.

If you prefer, write to Marie, Hearst Business Communications, 645 Stewart Ave., Garden City, NY 11530. She'll mail you the IC Master subscription form right away.

And, if you tell her you saw it in the 1991/92 EEM, she'll take $10 off the subscription price!

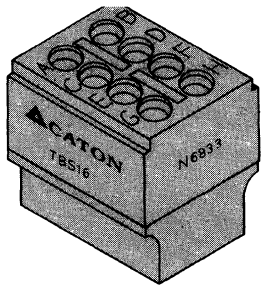
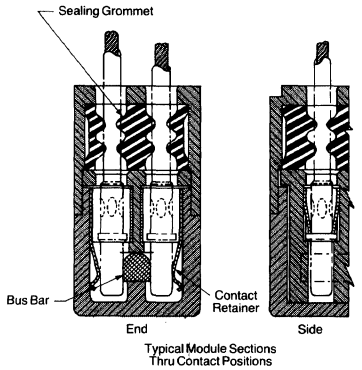
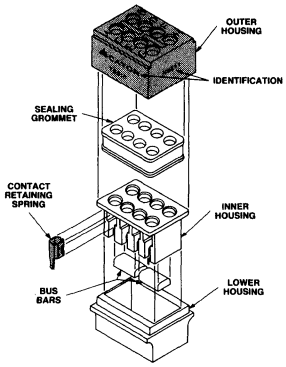
SEALOK®

an Environmentally Sealed Modular Interconnection System





Typical Module Sections Thru Contact Positions



Description

Caton Connector announces **SEALOK**, an environmentally sealed modular interconnection system for shipboard, aircraft, aerospace and many industrial commercial applications where protection against environment is required.

Caton offers in **SEALOK** a compact system that:

- Functions over a wide range of temperature, vibration and shock without variations in contact resistance.
- Protects electrical junctions from humidity and corrosive attack.
- Provides wiring flexibility.
- Can be readily installed and serviced by tools common in industry.

Features

Outer Housing. The outer shell of the **SEALOK** module is constructed in two halves of glass-filled diallyl phthalate, a lightweight thermosetting plastic ***that protects the sealing grommet and other internal components from damage.*** The two halves are bonded in an area where the adhesive will not contaminate contact and locking surfaces.

The hard top of the outer housing:

- Ensures maximum seal effectiveness even if severe training of wires occurs.
- Provides a guide for proper insertion and extraction of contacts.
- Offers a surface for clear identification of contact positions and bussing arrangements.
- Minimizes exposure of sealing gland surfaces to injurious fluids.

16 Series
High Voltage Cable Assemblies

The **16 Series** is a basic and proven design. Standard quality materials, customization and a long track record make this series idea for most High Voltage Corona-Free cable assembly requirements.

Pictured here are some typical cable assembly configurations. We are not limited to just these assemblies, so please consult your local sales representative or call **CATON** directly with your requirements. We have **1 through 13 connector assemblies available as standard product.**

The **16 Series** utilizes standard MIL-C-5015 Class E aluminum shells. These inserts are resilient silicone per ZZ-R-765 with tapered self centering contours. When mated, all air is excluded thereby making the connection impervious to the outside environment. All shields are circumferentially terminated using a grounding wedge which provides an excellent ground circuit and overall assembly durability.

Factory terminated assemblies have corona inception voltages of 4 KVDC thru 20 KVDC when measured on a corona test set with a minimum sensitivity of 15 picocoulombs.

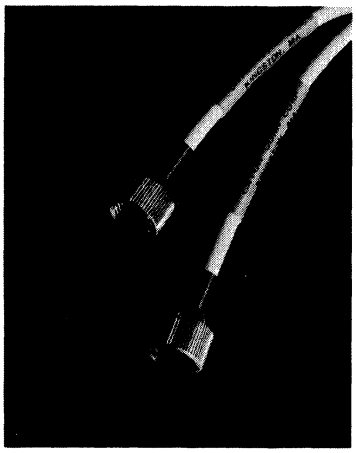
17 Series

High Voltage Lead Connectors



Tripping of sensitive logic circuitry, power loss and eventual failure are the three main problems Corona can cause. The **CATON 17Series** is designed for Corona-Free performance...2-1/2 times superior than AMP assemblies.

CATON assemblies have corona inception voltages of at least 5 KVAC as measured on a corona test set with a minimum sensitivity of 5 picocoulombs.

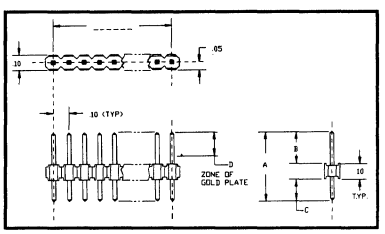
COMM CON CONNECTORS INC.

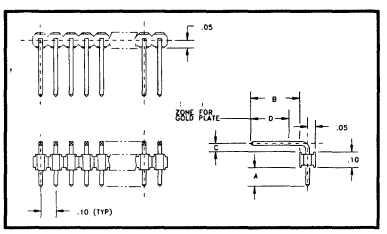
Comm Con Connectors Inc. was established in 1982. From inception, our plan has been to offer the Electronics OEM marketplace a variety of header interconnects not available from the more traditional connector companies. Our product flexibility is a result of 14 different standard contact lengths (from .330 to 1.430), 3 plating options (tin, gold, duplex gold/tin), and plastic insulator options such as glass filled thermoplastic or high temp thermoplastic, in single, double and triple row versions. A great variety of additional customizing of these parts is possible including specific pins eliminated for keying, bypassing traces on a P.C.B., or locating the plastic at other locations on the pin. Creation of special bends is also possible.

All of our strip headers and socket connectors employ a "breakaway" feature, however, as a service to our customers, we will cut any of these products into the desired size at no charge.



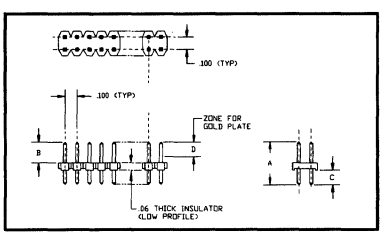
SINGLE ROW; DOUBLE ROW; TRIPLE ROW STRAIGHT HEADERS

Our single row straight headers are available in 12 pin lengths, from .330 to 1.430, (in .100 encrements). In addition to 35 standard "B" and "C" dimensioned parts, we offer an unlimited variety of customer specified parts.



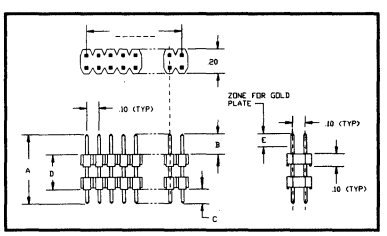
SINGLE ROW; DOUBLE ROW; TRIPLE ROW RIGHT ANGLE HEADERS

Our single row right angle .025 sq headers are available in both the low profile and high profile, as standards. Many choices in pin dimensions gives us the broadest package of right angle breakaway parts available.



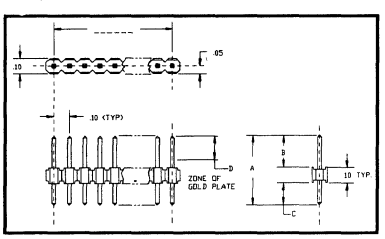
MICRO HEIGHT HEADER SYSTEM

Available in single, double or triple row versions, our micro height headers utilize a .060 thick plastic, and a .330 long pin, which decreases the height .110 from the botton of the PCB, vs the standard solder header.



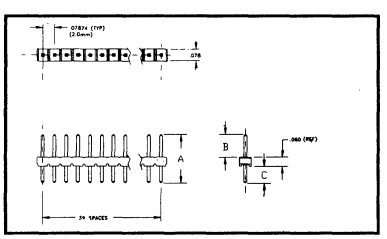
SINGLE AND DOUBLE ROW SPACER-HEADER INTERCONNECTS

This new concept allows the design freedom of interconnecting two PCB's with a pre specified mating length. Eliminates having both a plastic spacer, and a seperate interconnect.



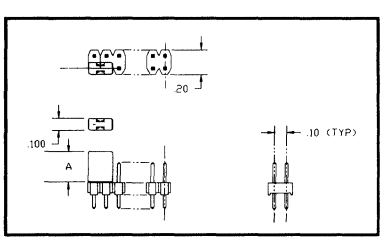
HIGH TEMPERATURE HEADERS

For infrared or vapor reflow applications, we offer a high temp plastic insulator with a rating in excess of 260 C. Both single and double row parts available.



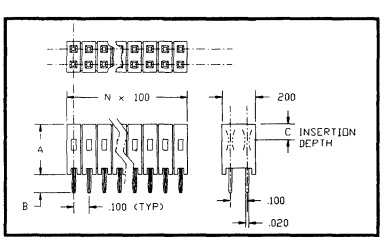
MICRO SPACED CONNECTORS

Two series are available for tight circuit center designs, .050 and .079 (2mm). Both series include headers, sockets and shunts.



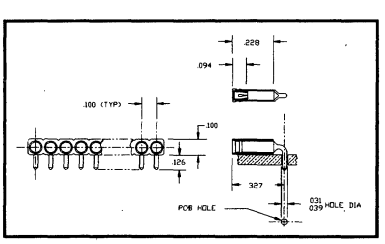
BUSSING SHUNTS

We offer a variety of bussing shunts to cover most applications. These include 4 styles of .100 center parts, .100 center multiple shunts (2 to 10 attached together), and micro spaced .079 parts.



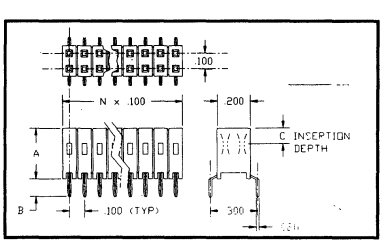
STRAIGHT SOCKETS

For PCB disconnecting applications, we offer several different sockets, from .185 tall for low profile, to .315 standard applications. Designs include both modified box, and hi-rel screw machine contacts.



RIGHT ANGLE SOCKETS

For right angle disconnects, we offer both single and double row socket versions. These parts utilize hi-rel screw machine sockets.



BOTTOM ENTRY SOCKETS

To eliminate hand soldering of a socket to a PCB when a disconnect application is utilized, we offer a bottom entry socket that is soldered on the component side of the board. Access of the pin is through the PCB, into the bottom of the socket.

MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Corcom's Signal Sentry Filtered Modular Jack provides a space saving and cost effective solution to signal line RFI emissions and susceptibility problems in telecommunications equipment, computers, terminals, workstations and peripherals.

Conventional protection places separate filtering components on the printed circuit board near the connector, which adds to design/redesign requirements, uses valuable space, and sacrifices performance. The unique Corcom design, however, provides interference suppression at its optimal location by integrating filtering into the RJ11 (6 position)/RJ45 (8 position) jack itself.

The Corcom Signal Sentry Filtered Modular Jack is the ideal connector to solve the RFI problems in your LAN, PBX, local I/O and ISDN interfaces to twisted pair or other multi-conductor cabling systems.

For detailed information, dimensions and PC board layout call or write for Signal Sentry Brochure.

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:

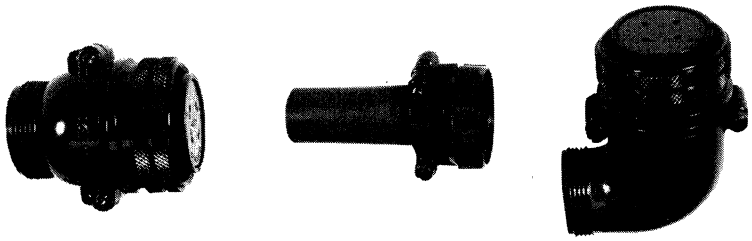
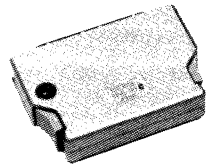
MIL-C-5015 Circular Connectors



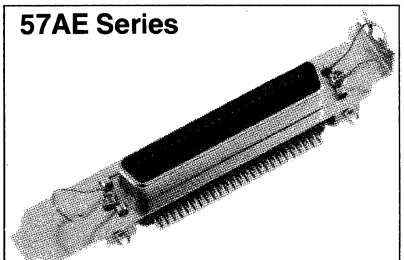
DDK's DMS series of circular connectors are MIL-C-5015 intermateable and intermountable and are cadmium free. By eliminating cadmium, the environmental hazards associated with its use are also eliminated. The connector insulator material is diallyl phthalate and the shells are zinc plated die cast aluminum with an olive drab chromate finish. Clear and black finishes are also available. Silver plated contacts have pre-tinned solder cup terminations. The DMS series has over 70 insert configurations spanning 12 shell sizes and 5 contact sizes. Cable clamps, bushings, and cap and chain assemblies are also offered for the entire product series. DMS series connectors are applicable in the electronics, communications, commercial and industrial markets.

Active SCSI Terminator



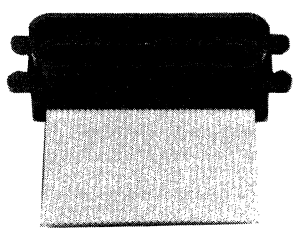
DDK's 57TE series EMI shielded SCSI terminators to ANSI x 3.131-1986 standards are used with computers and peripherals containing a SCSI controller circuit. The active terminator features a voltage regulator circuit which results in superior performance where many peripherals are involved in the system. Differential and single ended terminators are also available and all are intermateable with standard 57 series ribbon style receptacles. For today's new compact SCSI designs, terminators using .050 inch pitch technology are also available. Featuring low cost and compact size, all terminators can be designed to individual specifications.

57AE Series



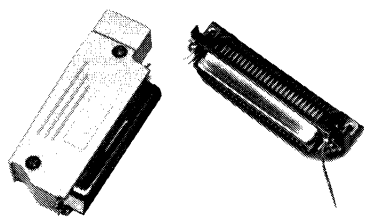
The latest addition to the wide range of ribbon style connectors offered by DDK is the 57AE series. This is a right angle SCSI interface connector with a low profile design for use in computer expansion card applications. Features include a closed insulator front to protect contacts from ESD, and when using the supplied mounting bracket, zero gap between the shell and the panel for effective EMI/RFI noise suppression. Intermateable with all 57 series ribbon style plugs. Supplied with or without the mounting bracket.

57F Series



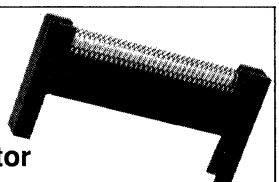
Ribbon style connector terminates to standard .050 inch pitch flat cable. Plugs and receptacles are available in 14, 24, 36 and 50 position sizes. Mating connectors come with spring latches for cable to panel applications or through holes for rack and panel applications. Metal or plastic strain reliefs. Choice of blue or black insulator colors. Intermateable with all 57 series family of connectors where EMI/RFI shielding is not required. Ribbon style contacts are self wiping for extra reliability.

57FE Series



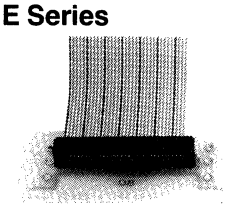
Shielded ribbon style connector features metal shell for protection from EMI/RFI. Plugs and receptacles are available in 14, 24, 36 and 50 position sizes. Used for cable to panel applications where either spring latch or screwlock retention is required. Plugs terminate to standard .050 inch pitch flat and round cable. Receptacles terminate to standard .050 inch flat cable. Hoods come in either straight or right angle versions. Intermateable with other connectors in the 57 series family. Used for SCSI or other computer related applications.

PCMCIA Memory Card Connector



Memory card connector system conforms to JEIDA Version 4 specifications. DDK Electronics, Inc.'s MCD series 68 position memory card connectors feature high density packaging for the latest cost effective memory storage technology. The contacts are on a .050 in. x .050 in. grid and the overall height of the printed circuit mount plug is 0.255 inches. The plug is on the system side and features include extended first make-last break contacts to prevent chip damage due to electrostatic discharge, card detect pins, and may accommodate a card ejection option. The mating connector is a surface mount socket which is mounted on the edge of the memory card. Contact design allows for at least 5000 mating and unmating cycles.

DHE Series



DDK's DHE series transition style connector offers a high density solution to board to cable applications. Available in 50, 60, and 68 positions these connectors terminate to .025 inch pitch bonded flat cable. Bi-level termination ensures a reliable connection and allows daisy chaining of boards. Retention contacts hold the board down for wave soldering operations. These connectors can be used with one another or with DDK's DHD series for board to board applications. For board to panel applications the DHE series may be used in conjunction with DDK's DHA-RE series shielded panel mount receptacle.

DOC

DDK's DOC series converts RS-232-C/D electrical signals into fibre optic signals. Using the standard 25 position D-subminiature connector interface, this device plugs into the RS-232-C/D port of a computer. The fibre optic interface is via an SMA connector, toslink, or neclink. Transmission speed is up to 64kbps and transmission length is up to 1 km using silica glass fibre. Fibre optic transmission allows complete isolation from EMI/RFI interference. Four incoming and four outgoing signals may be transmitted in synchronized or asynchronized modes. Other important features include the option for the user to change pin assignments, power and signal transmission indicators via LED, and optional 5V or 6V power source.

DuPont Electronics — Connector Systems

QUICKIE™ III IDC SYSTEM

The Quickie III system includes a complete line of female connectors, straight and right angle headers, and edge card connectors. Products are available in a variety of sizes ranging from 6 to 64 positions.

The female connector has a single-beam, long-wipe contact that provides a highly reliable electrical connection. A pre-installed bridge-type cover protects the contacts during handling and provides precise cover-to-base alignment during installation. It also reduces the assembly time required during connector installation.

Quickie III headers feature a unique duplex-plated pin with two-sided plating in the contact area; whereas, the two contact sides of the pin are plated in either gold or GXT, and the two noncontact sides of the pin are plated with gold flash. The solder-tail portion of the pin is fully plated with tin/lead.

These headers also feature four-wall shielding that protects the pin when the header is unmated, and dual-function latches that both lock and eject a mated connector.

PV™ Dual-Metal Female Receptacles

The Du Pont PV dual-metal receptacle provides unsurpassed mechanical and electrical performance. Its two-piece design offers durability and reliability. The spring withstands repeated insertions and withdrawals, all the while maintaining constant mechanical pressure on the pins. Excellent electrical conductivity is attained by the high normal force of the receptacle. The wiping action between the contact area and the mating pin cleans the contact surfaces of oxides during insertion and withdrawal. The PV line offers wide design flexibility. There is a choice of three spring thicknesses to help meet specific insertion/withdrawal force requirements. There are four terminal variations in crimp-to-wire sizes from 18 to 36 AWG, and a choice of several gold or tin/lead platings. A complete line of application equipment provides optimum assembly capability for varying production needs.

Clincher™ Connector Mass Termination System

The Du Pont Clincher™ system mass terminates flat conductor, flat cable or flex circuitry used in packaging applications requiring maximum flexibility and optimum space and weight savings.

The female Clincher™ simultaneously terminates all cable conductors without stripping and is ready for production use within 15 seconds, substantially reducing total installed cost over individually terminated methods. The Clincher™ assembly mates to 0,64 mm (0.025 in.) pins or headers on 2,54 mm (0.100 in.) centers to form a complete interconnection system.

The male Clincher™ offers the same features as its female counterpart. It can also be used to make a flying connection to a female Clincher™, PV™/housing assembly, or any other receptacle which can mate to 0,64 mm (0.025 in.) square pins.

The Clincher™ Solder Tab is designed to mass terminate flat, flexible cable and circuitry for soldering to a printed circuit board.

Easy-to-operate application equipment completes the Clincher™ system.

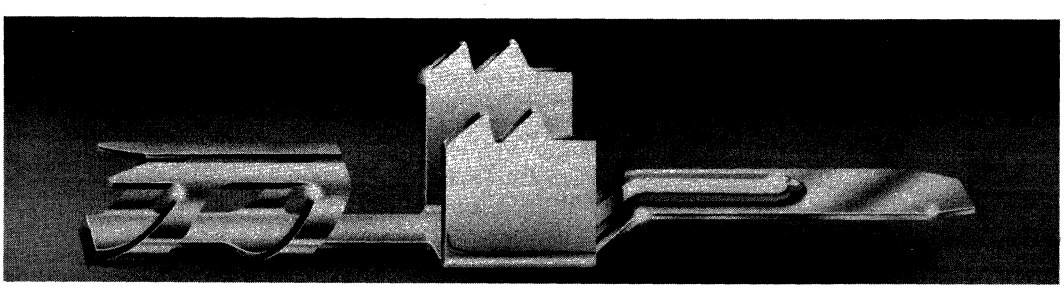
Rib-Cage™ II 0.050 Inch Connector for High Density Packaging



The new Rib-Cage™ II connector on 0.050 inch centers is designed for high density, low profile printed circuit board packaging. It is available in both surface-mount and through-mount configurations. The low profile of the connector allows for tight parallel board packaging.

Rib-Cage II is available in a double-row vertical card connector configuration in two by five through two by fifty positions, in increments of two by five. The contacts are duplex-plated with 30 microinches of gold in the contact area, providing gold only where needed for a more reliable and economical connector.

Rib-Cage II connectors are designed for low profile systems requiring high density. The connectors require only one-eighth the space of 0.100 inch connectors with the same number of contacts.

Latch-N-Lok™ Shielded Assemblies.

Improve your system's sales appeal. Choose from the industry's widest variety of compact plugs and receptacles. Straight, right-angle or combination designs. Latch on top, bottom or side. Panels, chassis or board mounted receptacles. And cords—coiled or straight—in any length, with any number of conductors, and foil, serve or braid shielding. Latch-N-Lok can use a variety of wire gauges (22 to 30 AWG) within an assembly.

All of these combinations can be customized and color-coordinated to your system. Costs no more than standard assemblies.

Latch-N-Lok is the only quick disconnect pin-and-socket system with a contact design proven over millions of applications.

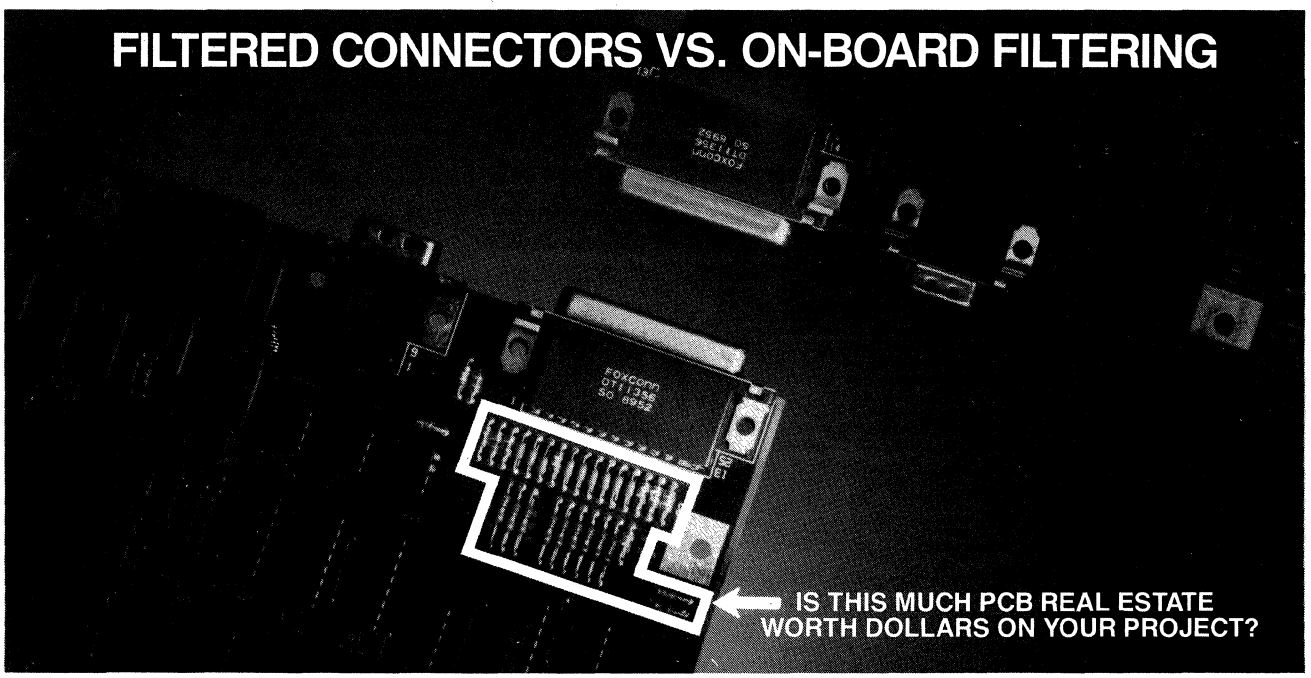
Filtered D-Subminiature Connectors

FOXCONN®

FILTERED CONNECTORS VS. ON-BOARD FILTERING



DOES YOUR EXISTING PC BOARD HAVE FCC COMPLIANCE PROBLEMS? IF THE ANSWER IS "YES" TO EITHER QUESTION, A FILTERED D SUB I/O CONNECTOR INSTEAD OF ON PC BOARD CAPACITORS OFFERS THESE ADVANTAGES.

INCREASED FILTERING EFFECTIVENESS—Filtering inside the connector yields the shortest ground loop, thus minimizing stray inductance and optimizing attenuation of high frequency noise.

LESS OCCURRENCE OF REGENERATION—On-board filtering may form a resonant frequency by its combination of filtering elements and stray inductance, and design revisions must be made to eliminate the problems. Using filtered connectors is a time-saving way of avoiding these hassles.

GREATER STABILITY—Filtering happens right at the I/O gate, so there is no "antenna effect" as there is for on-board filters.

IMPROVED TRANSMISSION OF SIGNAL—Smaller filtering elements can be used when filtering occurs directly at the connector, so there is lower insertion loss of the original transmission signal.

SIMPLIFIED INVENTORY—There are fewer parts to handle when filtering is included in the connector.

LESS MANUFACTURING TIME—Filters are already installed and tested in the connector.

REDUCED CABLE SHIELDING REQUIREMENTS—The more stable and efficient filtering of filtered connectors can result in reduced shielding requirements of cables.

DESIGN TIME SAVINGS—Creating and revising I/O filter designs for each PC board layout is time consuming, redundant, and inconsistent. But with predetermined attenuation curves, filtering connectors provide a reliable alternative.

COST COMPARISON OF FOXCONN FILTERED CONNECTORS VS. ON-BOARD FILTERING.

1. D-Sub Connector	US$ 2.50 – 6.00	US$ 0.84
2. Additional Filtering Elements		0.25
3. Additional Overhead and Labor		0.40
4. Extra Board Space		4.00
5. Extra R & D Time		5.56
Total:	US$ 2.50 – 6.00	US$ 11.05*

Less dependency on cable shielding provides additional savings, not included in this illustration. Computation of on-board filtering costs available on request.

SILVER ZEBRA® LOW RESISTANCE ELASTOMERIC CONNECTORS

Product Description

FUJIPOLY low resistance ZEBRA® elastomeric connectors are constructed of alternating parallel layers of electrically conductive and nonconductive silicone elastomer. The electrically conductive layer is filled with silver-metal particles.

The composite alternating layers provide reliable electrical connection when placed between two aligned conducting surfaces.

The low resistance ZEBRA provides a redundant connection with a minimum of two conductive layers recommended per PC contact pad. The connector is available with insulating barrier or silicone supports. The connectors are used for connecting electroluminescent (EL) and plasma type displays to PC boards or for connecting hybrid circuits to PC boards, among other applications.

Low resistance ZEBRA connectors are positioned between two aligned surfaces and are mechanically clamped together with a lid or another PC board. The connectors may be free standing or positioned in a retainer depending on packaging profiles and design.

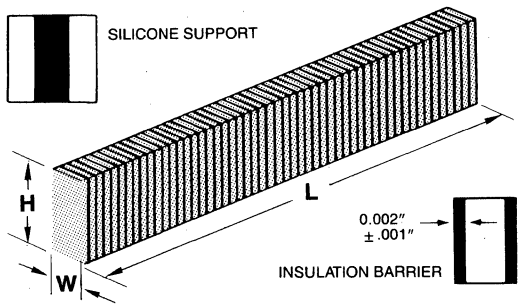
Design Recommendations

Recommended deflection is 5–20% of free height with minimum recommended deflection of 0.020″. Minimum deflection will vary with packaging applications and should consider overall height, PC board warpage, finish, etc. (Contact **FUJIPOLY** Product Application Engineering for assistance.)

Design recommendations for solid ZEBRA over 0.400″ deflect 0.050″ typical. Silicone supported over 0.400″ deflect 0.060″ typical.

The use of an insulating barrier or silicone self-support material on one or both sides of the connector is recommended. The silicone support is utilized to reduce clamping force and provide an element of environmental protection for a cost-effective connection.

Dimensional Specifications



Details show silicone support (left) and insulation barrier (right). Each is available on one or both sides. Configurations may also include support on one side and insulation on the other.

Note: Recommended Height (H) should be twice Width (W) dimension for minimum force deflection. Maximum Skewness 2% of Height.

Calculation of Resistance

For the purpose of calculating the resistance of silver ZEBRA connectors and testing them for compliance, please use the following formula:

$$R = \frac{.001}{W \times Ew} + H$$

WHERE: R = Resistance in Ohms
W = ZEBRA width, inches
Ew = Electrode pad width, inches
H = ZEBRA height, inches.

Fujipoly Connector W Series

(Elastomeric Connectors)

The high-accuracy rubber connectors of the Fujipoly W series with anisotropic conduction properties have 300–2000 fine metal wires per 1 cm^2 embedded in the thickness direction of the transparent silicone rubber sheet.
After inserting the Fujipoly W series connectors between the opposite electrodes, all that is necessary is to apply the appropriate pressure to allow the electrodes to be properly connected.
All fine metal wires are gold-plated. This finish ensures that requirements such as a low resistance and the ability to withstand a relatively high current flow can be met.

Fujipoly Connector W Series Features

- Ensures proper solder-free connections by mere insertion between the electrodes and applying the pressure.
- The fine metal wires have a fine pitch (the average pitch in the linear direction is 80μ for the L pattern) to allow high-density mounting. This also eliminates the need for positional alignment of the connectors when mounting.
- The continuity (contact) resistance is extremely small (1Ω/mm^2 or less).

Fujipoly Connector W Series Applications

- Mounting and inspection of chip carriers, QFP, TAB, PLCC, hibrid IC boards
- Mounting and inspection of display panels including LCD, LED and ECD.
- Connecting and inspection of printed circuit boards.

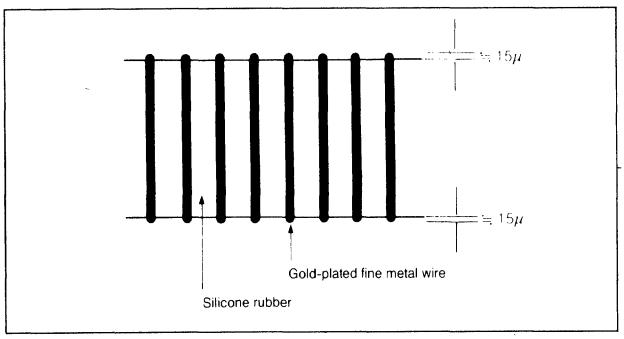
Fujipoly Connector W Series

(Elastomeric Connectors)

Types of W Series Fujipoly Connectors

WS□Type

This type of connector has straight fine metal wires embedded in a transparent silicone rubber sheet in a regular arrangement. The fine wires protrude slightly from both ends of the silicone rubber sheet to ensure a perfect connection at a very light touch. Suitable for mounting applications.



WB□Type

This type of connector has bent or curved fine metal wires embedded in a transparent silicone rubber sheet in a regular arrangement. The fine wires are curved so that these connectors are ideal for application requiring repeated compression. Suitable for inspection applications

Zebra® Connectors for Liquid Crystal Displays

High Resistance Connectors

FUJIPOLY ZEBRA® connectors (see Figure 1) have alternating parallel layers of conductive carbon-filled and non-conductive silicone rubber. They make reliable connections by being deflected between contacting surfaces. ZEBRA connectors are used for connecting any LCD from small displays for watches to large area displays for instruments. Table A shows the different types of ZEBRA connectors available. Table B shows performance characteristics. Figure 1 shows the three dimensions of the ZEBRA connector. When ordering, the three dimensions should be specified within the limits shown in Table C. For best overall performance, ZEBRA connectors must be ordered and used with a ratio of H/W equal to or greater than 1.5.

Supported Zebra® Connectors for Liquid Crystal Displays

Self-Supporting Connector

The Self-Supporting **FUJIPOLY** ZEBRA® connector is a standard 1006 ZEBRA connector element supported by a soft, non-conductive silicone rubber on one or two sides. The silicone rubber creates a larger width that eliminates need for a holder, and yet the force required for deflection is very low. Only 1.0 to 2.0 lbs. force per linear inch is required for proper contact. The standard Self-Supporting ZEBRA connector has 0.020"/0.508mm wide ZEBRA connector element and is available in four different widths to accommodate LCD's with glass lip overhang of 0.060"/1.52mm minimum.

It is used to connect LCD's to printed circuit boards and eliminates bowing of the printed circuit board due to the low force required to make contact.

LCD Connector Assemblies

Description

FUJIPOLY® LCD connector assemblies with clear bezels provide an attractive and reliable way of mounting LCD's onto a PC board. Electrical connection between LCD and PC board contact surfaces is made by a Series 1006 ZEBRA® connector which consists of alternating parallel layers of conductive and non-conductive silicone rubber. Because the LCD is mounted on rubber components, the assembly provides shock and vibration protection for the display. The clear bezel provides an extra measure of protection for the LCD.

Standard Assemblies

LCD SIZE	FUJIPOLY® PART NO.
.540″/13.72mm x .940″/23.88mm	09-10050
1.2″/30.5mm x 2.0″/50.8mm	09-19137
1.2″/30.5mm x 2.75″/69.85mm	09-19143
1.5″/38.1mm x 2.75″/69.85mm	09-10067
1.5″/38.1mm x 3.695″/93.85mm	09-10075

Assembly

The connector assembly consists of a holder/retainer, two ZEBRA connectors, viewing area mask, and a clear bezel. Assembly is simple: place the holder/retainer on the PC board using the locating studs for alignment, insert the ZEBRA connectors, LCD, and mask and secure the bezel with two screws. The LCD connectors are available in two configurations: one for Dual Inline displays where the viewing area is in the center, and one for Single Inline displays where the viewing area is offset toward the top. The same bezel is used for both formats; however, the masks and holder/retainers are selected to match the LCD.

The operating temperature range for the connector assembly exceeds that for the LCD; the ZEBRA connectors provide a gas-tight seal of the contact surfaces to assure reliable operation in hostile environments. The bezel protects the LCD polarizer from scratches and may be used directly in the window provided in the instrument or clock case.

Series 7000 & 8000–Low Resistance Connectors

Description

The **FUJIPOLY** ZEBRA® Series 7000 and 8000 elastomeric connector elements are "D"-shaped, low durometer silicone elastomer core around which flat metallic conductors are vulcanized in a row parallel to each other. The tips of the metallic conductors are turned upward so that point contact can be effected; in addition, contact is made to the flat area when the connector element is positioned between two printed circuit boards. The point contact will penetrate surface oxides or contaminants which might be present on the surface of the contact pads, thus assuring reliable electrical connection on two planes. Also available are standard board to board assemblies which include connector and holder.

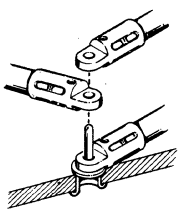
9W WIRE TERMINATION SYSTEM



Design Features

SOLDER-WICKING BARRIER

The design of HIRAM JONES 9W Wire Termination Systems provides a solder-wicking barrier, assuring flexibility of the wire and thus minimizing wire failures due to fatigue.

Wires are inserted in the 9W Crimp Terminals and crimped in place. Full engagement of the wire is determined by means of the inspection hole provided in each crimp terminal. The 9W Crimp Terminals are then attached to their mating Terminal Posts and soldered in place.

The entire termination is made without application of solder to the wire itself. It is, therefore, impossible for solder to "wick" up the wire.

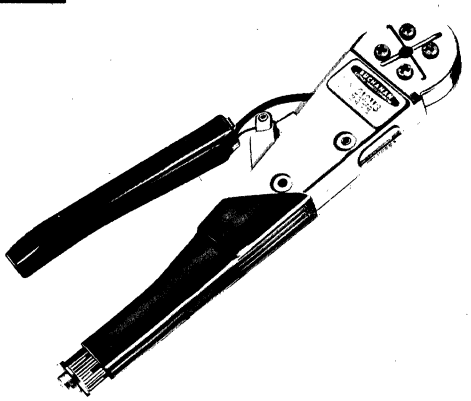
EQUIPMENT SERVICEABILITY

HIRAM JONES 9W Wire Termination System provides all the advantages of a hard wired system without the disadvantages of foreshortening of the service loop when disconnection and reconnection is required. The ease with which connections are made is a feature which is particularly advantageous in systems where connectors are undesirable, yet assemblies or sub-assemblies must be disconnected from time to time for service or replacement. To disconnect HIRAM JONES 9W Crimp Terminals, simply heat and lift off the mating terminal post. Reconnect by resoldering the 9W Crimp Terminals to the terminal post. Neither the mechanical nor electrical joint is affected by repeated removal and resoldering.

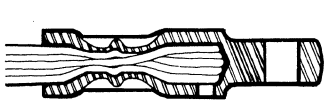
Increased Production Efficiency

By permitting pre-assembly of wires by unskilled operators, HIRAM JONES 9W Wire Termination Systems reduce production costs. Wires may be cut to length, stripped, and the 9W Crimp Terminals crimped in place. Final assembly consists of simply laying the pre-assembled Crimp Terminal on its mating terminal post and soldering in place.

9W MINIATURE MICROCRIMP TOOL



CROSS-SECTION OCTADENT CONFIGURATION



The 9W Miniature Microcrimp Tool (Buchanan No. 612118) is cycle-controlled to assure crimping to the selected depth. Once the crimping operation is started, the tool cannot be opened without completing its cycle.

9W LOCATORS — Specially designed locators are available for each of HIRAM JONES 9W Crimp Terminals. The use of one 9W Miniature Microcrimp Tool and the custom-designed 9W Locators is recommended to guarantee the precise crimp depth setting for each Crimp Terminal. When ordering, specify part number — i.e., 9W-206 Locator.

OCTADENT CRIMP — The 9W Miniature Microcrimp Tool produces an octadent configuration which provides uniform displacement of wire and crimp terminal material. The wire strands and the crimp terminal material are formed together in a solid mass with little or no reduction of the mil area of the wire strands.

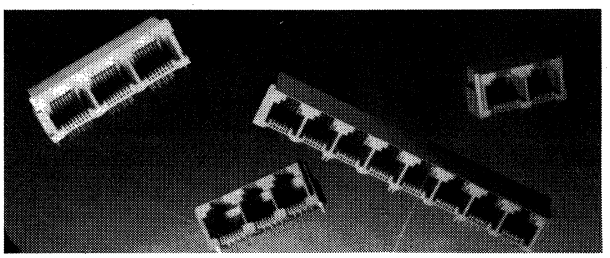
Hirose Electric (U.S.A.) Inc. offers the world's second largest line of electronic connectors, including circular, rectangular, telephone modular, coaxial, printed circuit type, IDC, IC sockets, microwave, fiber optic and other miniature types of connectors.

Hirose Modular Gang-Jack Connectors



Hirose has expanded its line of two-, three-, and four-position auto insertable modular Gang Jack connectors with the introduction of four new multi-cavity connectors.

The new Gang Jacks are TM 5RQ-1414 (one 8-contact and one 6-contact), TM 5RQ-2020 (two 6's and one 8-contact), TM 5RSA-2424 with three 8-contact positions and the TM5RJ1-4848, with eight 6-contact positions.

Hirose's side and top entry Gang Jacks offer the convenience and cost savings of a modular connection system in dual, triple, quad and larger packages.

Ideal for OEM manufacturing, Gang Jacks are widely used in designs for modems, phone answering devices, dictation machines, test instruments and office automation products.

Hirose's innovative 'ganged' design aids in inventory control by eliminating the need to stock more than one connector per installation and permits easy PCB loading either automatically or by hand.

Metal PCB "Lok-Tabs" assure a firm hold between connector and board prior to and during wave soldering operations. These unique tabs help form a "solder-rivet" which bonds the Jack and board.

Hirose Gang Jacks feature ABS insulator, suitable for wave soldering and phosphor bronze round terminals with 1.0 microns of gold plating. The low profile Gang Jack is ideal for trimline designs and is available for side entry and top entry mating. A rectangular shape simplifies automatic insertion and the Gang Jack is supplied in a popular grey color with optional colors available.

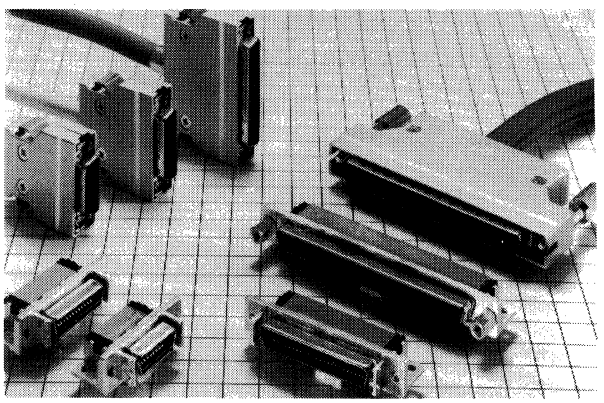
MINIATURE DX SERIES I/O CONNECTORS

(0.050 center Mating Face)



Hirose Electric's new miniature bellows contact connector series is currently available in 20, 28, 36, 50, 80 and 100-position shells. Future connectors include 60 to 68 position inserts.

The new 1.27mm (0.050") I/O connector, the "DX",™ incorporates bellows, or "ribbon" type contacts to eliminate problems encountered with other miniature connector designs using pin and socket configurations.

The new "DX"™ design provides positive locking, precise coupling, anti-scooping terminal protection and EMI shielding in a compact and rugged package. Using IDC termination to AWG #28 or #30 wires, this new series offers flexibility of using ribbon or discrete wire cable.

The unique Hirose shell design assures first make/last break gounding and offers complete protection from ESD, to the exposed terminals on the board side, when the connector is unmated. Positive locking is accomplished through the use of an integral "One-Touch" mechanism to assure repeated quick and effortless closures without damage to the lock or the terminals.

With Hirose's new surface mount connectors, your miniature designs can be on the cutting edge of technology.

Leave it to Hirose engineers to develop and manufacture an entire family of SMT connectors that are precise, rugged and reliable.

Every terminal tail uses the strongest and most advanced metal alloys and mechanically sound designs to assure the correct amount of flex under severe stress and thermal cycling conditions. Solder joint failure is thus reduced to zero.

Hirose assembly and production methods produce precise axial alignment of the terminals, allowing the greatest possible area of contact with the PCB pads. This precision reduces the amount of solder required for mechanical strength and limits the potential for failure from repeated stress.

HIF7 Connector for SMT or Through-Hole Applications

VACUUM SEALED RECEPTACLES: LEMO's sealed-through connectors are used in applications where moisture or some types of gas should be prevented from escaping from or to a closed circuit process and where connections and disconnections are necessary only for overhauling work.

The leakage rate of LEMO's sealed through connectors is 1×10^{-6} torr.1/sec.

UNDERWATER CONNECTORS–03 SERIES: LEMO's new connectors for underwater applications where watertightness and stability are guaranteed for up to 870 psi or severe vibration conditions.

PRINTED CIRCUIT CONTACT CONNECTORS: LEMO has many connectors, coaxial and multi-contact in the B and S Series designed for printed circuit board mounting.

CABLE ASSEMBLY: LEMO offers quality cable assemblies to match their precision engineered connectors.

CUSTOM DESIGNS: For more information, please contact LEMO U.S.A., INC.

LEMO's Family of Connectors

Introduction for Connector Specifiers

There are 4 variables you should identify in specifying a connector:

1. Number of contacts
2. AWG
3. Voltage and current
4. Cable jacket outer diameter (for collet)

The tables on the following pages present this information concisely.

FIRST: Find the tables for the connector family which interests you.

SECOND: On the table selected, locate the size which accommodates the 4 variables noted above.

THIRD: Locate the outer shell configuration after the insert tables. Other configurations may be available for special applications.

If after using this reference you require additional information, please request our full-line catalogs for more details and other special application connectors.

PLEASE NOTE: If you do not see what you need please ask us. LEMO is constantly developing new products; therefore, all available connectors could not be included in this reference.

SHELL MATERIALS

Shells are constructed of precision machined brass with a hard satin chrome plated finish assuring rugged housing for maximum safety and uniform mating. Black, green or yellow chrome plating optional.

Optional materials include stainless steel, aluminum alloy (anodized in 6 colors: blue, yellow, black, red, green and transparent) or PEEK.

LEMO's lightweight Plastic Series of connectors are made of polysulfone PSU (MIL-P-461/20 MR). These connectors can be autoclaved.

Voltage Test Procedure—

PROCEDURE FOR DETERMINING TEST VOLTAGES AND WORKING VOLTAGES FOR LEMO CONNECTORS:

Test Voltage: Test voltages are determined by taking an average of the points at which arcing occurred and reducing it by ⅓.

Working Voltage: Working voltages are determined by taking test voltages and reducing them further by ⅔.

For high-voltage connectors, IEC publication 130-1 § 14.5 b) applies:

$$\text{Working voltage} = \frac{\text{Test voltage}}{1{,}5}$$

LEMO guarantees the proper functioning of the connector at working voltages.

Although this may appear quite conservative, it is in keeping with LEMO's insistence on assuring proper functioning and maintenance of high-quality standards.

Current ratings noted are per contact.

B & K Series Inserts Multi-Contact Connectors

Wire sizes in this table are valid for solder-type contacts (standard version). AWG may vary depending on wire type (solid or stranded).

Contact types: C = crimp contact S = solder contact
P = printed circuit contact

C & G Series—Short Type Connectors

LEMO's Short Series of connectors are ideal for applications where space limitation does not allow the use of a normal-size connector. 2C Series connectors do not mate with standard S Series connectors nor with E Series environmentally sealed connectors. Contact types are available in solder only.

LEMO's 2G connector features the same short shell design as the C Series but with a mechanical keyway. It is available in an 18 contact version.

Our "U" contact gives our connectors increased reliability when terminated to flat cable. Our patented L/H contact lowers the insertion force necessary to make a connection while raising retention capability, creating a reliable connection that stands the test of time. All 3M contacts are beryllium copper, phosphor bronze or copper alloys, with gold or tin alloy plating, for maximum design flexibility. Bodies are made of rugged polyester, including high temperature variations for demanding applications.

3M flat cable is available in 18-30 AWG gauge including shielded and round jacketed versions to complement the connector line. New cables such as 1mm, halogen-free and pleated foil provide superior performance in specialty areas.

Textool™ End-Use Sockets

For End-Use Sockets that Stand Up to Repeated Insertions and Withdrawals, Tough Customers Turn to 3M

3M makes it easy to get the right IC sockets for your needs with our selection of Textool designs for end-use applications. Sockets accept PQFP, chip carrier, flat pack, DIP and discrete components in a variety of body, contact and plating materials.

Our PQFP sockets are designed for a life cycle of more than 25 insertions and withdrawals. This offers more reliability for socketing JEDEC MO-069 devices.

ZIF DIP™ end-use DIP sockets are designed for applications requiring field replacement for reprogramming of packages: PROM, EPROM, mobile telephones, PABX equipment, programmable auto horns, robotics and more.

The low profile and durable leads of our chip carrier sockets make them ideal for high volume production applications. We also offer a wide range of test and burn-in sockets as well as IC carriers for nearly all package types. These carriers are useful in handling, automated assembly and testing. Special anti-static materials protect ICs during handling.

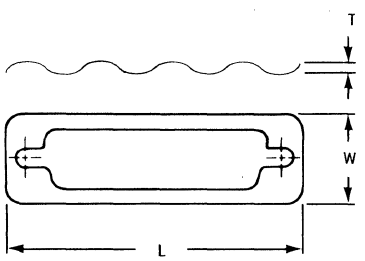
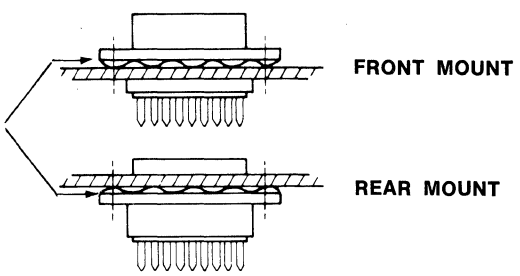
Waved Metal Gaskets Complete EMI Protection For Filtered or Non-Filtered D Subminiature

Proper mounting of any EMI filter — including the EMI filtered D Subminiature — is critical to the achievement of electromagnetic compatibility. The mounting surface for grounding the connector must be free from paint or any other insulating material. The sketches below indicate the use of one of Spectrum's EMI gaskets to fill any tolerance gaps and adjust for irregularities in the flatness of the mounting surface.





Shell Size	Mounting Configuration	L	W	T Free State	T Compressed	Part No.

Spectrum EMI Filtered D Subminiature...Unique

Spectrum D subminiature connectors feature a unique ground plane to effectively block bulkhead leakage of EMI. The design also provides line to line isolation separation to limit cross talk (line to line mutual coupling) to an absolute minimum. Another, and a most important feature, is the coaxial spring contact that provides proper electrical grounding when mating one connector to another connector.

The Industry Performance Standard: Connectors from Multi-Contact.

Outstanding Design. Experienced Manufacturing. Guaranteed Safety. Excellent Quality. Superior Service.

From design to manufacturing, Multi-Contact connectors are produced to satisfy the highest industry standards of performance and reliability.

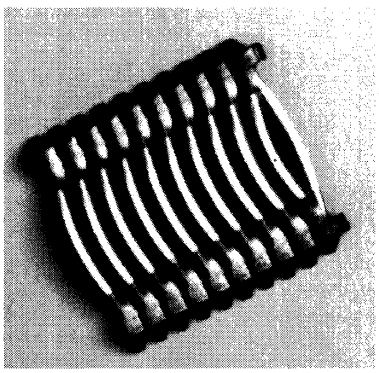
Sophisticated R&D efforts, in-house testing, and stringent quality controls have one simple, critical result: state-of-the-industry connector technology.

Multi-Contact connectors are made from solid brass (CuZn40Pb2), first nickel plated, then sealed with either a hard gold or hard silver plating.

MC-MULTILAM™ connectors exemplify Multi-Contact's innovative technology and commitment to quality. The precision, multiple louvered contact interface assures optimum contact performance. The MC-MULTILAM™ contact band is made from beryllium-copper, then precision-stamped and tempered, and finally hard gold- or hard silver-plated.

MC-MULTILAM™ connectors can be used for unlimited applications due to their design flexibility and advanced features:

- High contact pressure—yet low insertion force
- High specific current capacity
- Lowest contact resistance
- Low voltage drop—minimal heat rise
- Mechanical strength—tens of thousands of mating operations
- Precious metal plating—excellent corrosion protection, even in aggressive and hostile environments



The MC-MULTILAM™ System...

...efficient solutions for all applications.

OXLEY TEST POINTS

TEST IT!
with KINKY PIN TEST POINTS
Reliably. Efficiently. Economically.

Designed for plated thru hole applications, Oxley's compliant Kinky Pin retention mechanism allows wide hole tolerance. The precision turned pin head prevents a test probe from being dislodged and is available in two lengths for low profile or high density applications. Easily wave or hand soldered into place.

The **OXLEY KINKY PIN test** point connector is a new compliant pin for use in plated through hole (PTH) printed circuit boards.

Intended to be used as a test equipment connection point, the precision turned pin head prevents a test probe being dislodged.

An ingenious kinked pin is utilized as a compliant retention mechanism, designed to prevent damage to through-plated holes during insertion while providing sufficient retention for wave or hand soldering.

IEC 320 Power Inlets & Connectors

The IEC 320 power inlet is the most commonly used means of connecting a detachable cordset to electrical or electronic equipment that consumes up to 16A at 220-240V (20A/120V) or less. (European voltages and frequencies are typically 220-240VAC, 50Hz). IEC 320 inlets are used in Europe, North America, and throughout the industrialized world. By designing an IEC 320 power inlet into a product, the manufacturer can attach the correct international cordset (e.g., a cordset with a British, Australian, Continental European or North American NEMA plug—see our pages in EEM section 6000) just prior to shipment. See pages that follow for modules that combine an IEC 320 power inlet and other functions. (Accessory power connections based on IEC 320 are also shown on the following pages.)

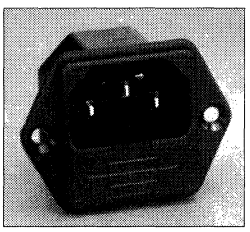
International Power Entry Modules Combine Functions

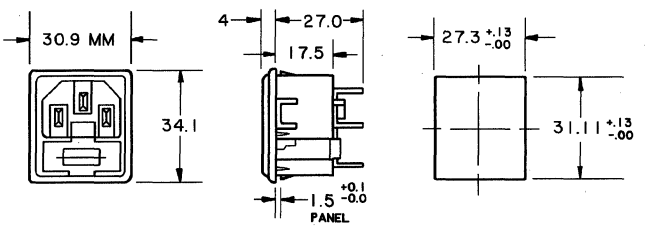
65°C
IEC 320
C13-14

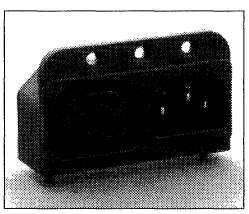
Power modules aid in configuring a product with the correct cordset, voltage, and fusing for international or North American markets, and can also save on space, assembly costs, and components management because several functions are combined in one unit. A power module can also make a product safer; because it is possible to interlock the power entry connector with access to a fuseholder or voltage selector, the equipment user ***must*** remove the power cord before changing a fuse or adjusting a voltage selector.



2 Function Module

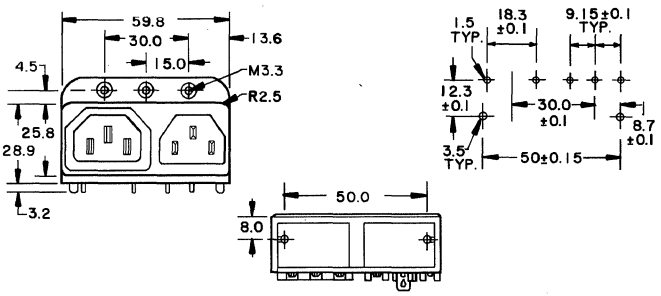
#83110110: solder contacts
#83110130: 6.3mm solder/QDs
Combines 1) IEC 320 inlet and 2) carrier for 5x20 mm fuse. Space for spare fuse; order fuses separately (see Sec. 4300). Push-in mount also available.
Approvals: VDE, SEMKO, SEV, UL recog., CSA cert. at 6A/250VAC

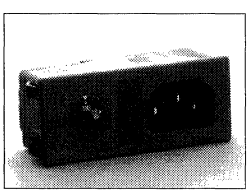




2 Function Module

#83511400: Printed circuit mounting power entry module combines: 1) IEC 320 inlet; 2) accessory outlet. Connections made by solder pins.
Approvals: UL recog., CSA cert., VDE at 10-15A/250VAC





Filtered model also available.

Note: Voltage selector is not designed to be switched while power is applied; selection must be made before connecting the unit to the power mains.

3 Function Module

#83510170: Power entry module combines: 1) IEC 320 inlet; 2) integral carrier for 5x20mm fuse; 3) and 2-position voltage selector for No. Amer. 110VAC & Cont. European 220VAC. Snap-in mounting for panel thickness of 1.0-2.0mm (0.04-0.08"). Connections are made via soldering tabs. Order fuses separately (see Section 4300).

NEW! Preconfigurable for export applications. The modules below provide an added convenience for single fuse configurations: the fuse drawer—which doubles as a voltage selector by rotating the drawer—can be preconfigured with a North American 3AG fuse in the "110-120VAC" side of the fuse drawer and an international 5x20mm fuse in the "220-240VAC" side. Position the drawer for voltage selection and the proper fuse will also be switched into the circuit.

International Socket Strips—test products before export

The International Socket Strip incorporates seven of the main overseas socket standards in one device. Connect it to your own power source in burn-in racks or test labs where products with international cords or cordsets are being prepared for export; or, use it for receiving inspection on international cords and cordsets.

Installation to your power source: The International Socket Strip is equipped with two unterminated power cords—one for connection to your 220VAC/ 50Hz power source, the other to a 240VAC/50Hz power source. Conductor size is 1.5mm²—slightly larger than 16 AWG which is 1.23mm². Each circuit is rated at 16 amps max. for all of the sockets combined. Each cord is 2.5 meters long and clearly marked as to voltage. The jacket and primary insulation are stripped and ready for installation to the appropriate power source. The primary insulation is color-coded in accordance with international standards: green/yellow=ground • brown=line • blue=neutral. Table or rack mount models are usually available from stock.

Note: Our "International Power Source" converts standard North American input voltage of 120V/60Hz to output voltages of 0-260VAC at 47-150Hz or 150-500Hz; see EEM section 4050.

Pomona Makes Testing Easier, Dependable and Accurate

Single Point Test Clips

All of Pomona's Single Point Test Clips are gold plated for the best electrical contact. And, the contact point stays where you put it because the material it's made of is the best: stainless steel for the smallest clips, beryllium copper for all the others.

Wide Selection. "Hooked" Grabber® tips are available in 3 sizes, pincer tips for even tighter spaces (like ICs & SMDs) in 2 sizes. Connect them to your wire, or we'll wire them up for you, ready to use. They're all in the catalog, along with a lot of other "solid gold" ideas.

See your nearest Authorized Pomona Distributor or contact POMONA ELECTRONICS.

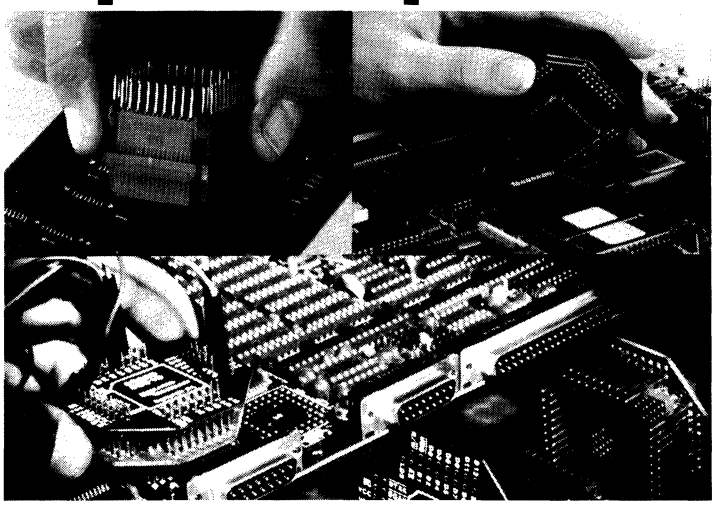
Pomona Surface Mount Device Test Accessories, IC Clips & Adapters

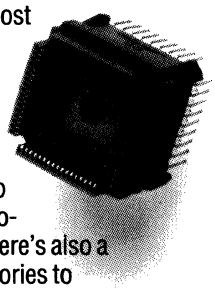
Make Testing Easier For Tomorrow's Hottest Industry.

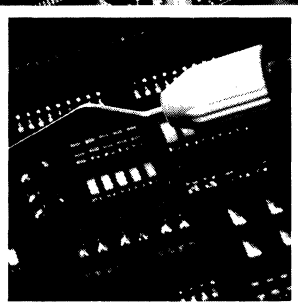


Whether you're troubleshooting today's most common IC packages, or seeking to test the newest Plastic Quad Flat Pack (PQFP) devices, Pomona provides the answers to accessing otherwise impossible-to-test, high-density IC leads. 73 IC clips and adapters are offered in styles to meet your needs.

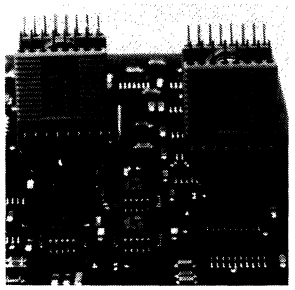
Because all DIP and other IC clip and adapter requirements are not the same, Pomona provides a carefully chosen selection of devices to fit your specific application. Nickel silver contacts for low cost, or gold plating for low contact resistance. Pomona IC Clips fit over board mounted ICs. "Pin Breakouts" fit between the IC and the socket. "Socket Interfaces" fit in place of the IC, directly in the socket.

For ICs too small for alligators or most single point clips, Pomona offers solutions for testing today's most common 0.050" pin spacing packages; SOIC, PLCC and LCC. For even higher densities of 0.025" (nominal) spacing, where no single point clip can fit, Pomon introduces clips for PQFP packages. There's also a host of helpful Pomona test accessories to compliment the increasing demands for dependable IC testing.



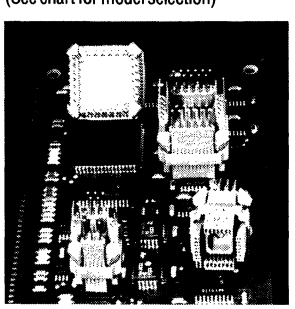


SMD Dog-Leg Microtip Test Probe included in Kit No. 5676 provides a needle point tip for contat with circuit pads. The sharp but flexible tip stays in place for reliable contact during test.



SOIC Clip™ adapters feature insulating barrier between each gold palated beryllium copper contact to prevent shorting. Upper contacts are 0.025" square gold plated phosphor bronze pins on 0.100" centers. (See chart for model selection)

SMD Test Tweezers (Models 5142, 5143 & 5678) provide simple yet accurate method to test devices. Each tweezer tip contains a gold plated beryllium copper contact.
Model 5142-with BNC male connector
Model 5143-with 2 standard stacking banana plugs
Model 5678-with 2 sleeved banana plugs



PLCC Quad Clip® adapter uses a "snap ring" to securely lock onto Plastic Leaded Chip Carrier (PLCC) body. Six models available form 20 to 84 pin styles. Gold plated beryllium copper contacts. Upper dual row of pins at 0.100" centers for each testing access. (See chart for model selection)

Power Dynamics IEC Connectors have been submitted, tested and approved by most recognized National Testing Agencies. These prior approvals eliminate the necessity of a retesting program when submitted in equipment being evaluated by these same testing agencies.

Our IEC Connectors which conform to CEE-22 are accepted throughout the world for use in electrical equipment. Designers and manufacturers are offered maximum flexibility as PDI Connectors mate with all universally accepted CEE-22 Power Cords. PDI offers a complete selection of Power Cords. Equipment which incorporates PDI Connectors also offers the further advantage of shipping finished units with correct cord set, permitting immediate use without time consuming modifications on the part of the end customer.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with the System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

5-WAY® Binding Posts

in wide color, metal and design choices

- **Standard, Miniature, Custom Color Ring, Militarized, Double Assembly and Grounding Types**
- **Choice of gold, nickel or tin plated current-carrying parts on most types**
- **Hex and fluted thumbnut styles**
- **Standard size types rated 30 A, 1000 V working**
- **Miniature size types rated 15 A, 1000 V working**

The original five-way binding posts — the first choice of electrical and electronic equipment manufacturers — are now available with more selections than ever before. All are designed to prevent accidental contact with current-carrying parts. Captive thumbnuts have a positive stop that allows enough space to make connections yet reduces the likelihood of accidental contact with electrically "hot" surfaces.

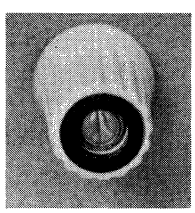
Plastic parts are molded of either Lexan* polycarbonate resin or nylon plastic per MIL-P-20693A, Type IV for excellent resistance to corrosive atmospheres, heat, oil or grease, abrasion and impact, chipping and cracking. Color selections are red, white, blue, yellow, black and green to assure ready circuit and polarity identification and more attractive panels.

Most types are available with either gold, nickel or tin plated brass current-carrying parts for improved conductivity and corrosion resistance. All metal parts are recessed for user and instrument protection and none touch the metal panel. Panel collars have "D" type shoulders for locking in keyed panel holes if desired. Types with larger No. 10-32 studs are also available.

Double Assembly Binding Posts — Available in a wide choice of red and/or black thumbnut color combinations in Custom Color Ring, Standard, Miniature and Larger Stud Types. They provide faster, more accurate ¾-inch (19 mm) center mounting on panels. Plastic insulating parts and metal current-carrying parts have the same specifications and features of single assembly types. All current-carrying parts are of gold plated finely machined brass. Thumbnut color combinations are red/black, black/black and red/red.

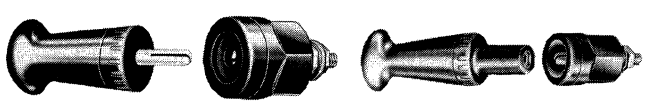
Militarized Binding Posts — Military specification types meet Military Specification MIL-P-55149/1B, a specification approved for use by all Departments and Agencies of the U.S. Department of Defense. They are available in standard size hexagonal nut and miniature size fluted nut types. Both styles are available with either black or red nylon plastic insulating parts. Current-carrying parts are gold plated brass per QQ-B-626. Operating temperatures are −40° to 225°F and dielectric strength is 3000 V.

Custom Color Ring Binding Posts



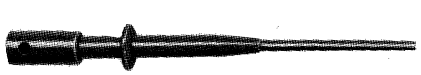
Cataloged Custom Color Ring Series types have neutral gray plastic insulating parts with thumbnut rings in red, white, blue, yellow, black or green colors for panels with superb visual appearance. The gray plastic parts coordinate and harmonize with most modern equipment finish colors. Contingent on minimum quantity requirements, the colors of insulating parts can be customized to meet the specific needs of any application. Miniature fluted nut types are rated for 15 A, 1000 V working; standard and larger stud hex and fluted nut types for 30 A, 1000 V working.

SUPERCON® Electrical Connectors



Socket and pin type single-conductor plugs and receptacles with nylon plastic parts and gold plated brass current-carrying parts. Wiring connections can be soldered or solderless with plug fastening screws that accept a wide range of cable sizes. Simple, 2-piece threaded plug construction in distinctive, functionally designed grip. Available in 25, 50, 100 and 250 A ratings. The 25, 50 and 100 A types are rated 125-250 VAC or DC current interrupting, 600 V unenergized connect or disconnect use only; 250 A types are rated 600 V unenergized connect or disconnect use only.

5-WAY® Test Probes



For test connections to PC boards and other components. Designed for fast, secure hook-on connections and will grip a component lead or IC package pin with 16 ounces of clamping force. For touch contact, the probe tip can be locked in the extended position. The large end of the probe has a banana plug receptacle for test lead connection. Current-carrying parts are beryllium copper and the plastic body is durable nylon available in either red or black. The compression spring is stainless steel for long life and resistance to corrosion.

ADVANCED "Q-G" AUDIO CONNECTORS, AA(*) F and AA(*) M SERIES

Switchcraft proudly announces new **ADVANCED** AA3* audio cord plugs...the first real innovation in quality audio connectors in more than a generation. Based on the highly successful "Q-G" audio cord plugs, the new AA3* audio cord plugs feature higher quality, simpler design and extended reliability through five major advances:

1. **New**...high performance inserts...traditional Switchcraft green color but with more durability and chip resistance.
2. **New**...solder terminals rotated for easier access and soldering.
3. **New**...rugged, 1-piece cable clamp to relieve pulling and twisting strains on terminations.
4. **New**..."No Screws" flex relief retention system.
5. **New**..."Dual Point" shell grounding system.

...AND NEW AA3* CORD PLUGS ARE FULLY SUPPORTED BY A FULL LINE OF TRADITIONAL SWITCHCRAFT CORD PLUGS AND RECEPTACLES

Switchcraft "Quick-Ground" connectors feature a separate "Ground-Terminal" electrically integral with connector shell. Ground continuity between mating plugs automatically accomplished through exclusive "Ground Contactors". Possible loss of insert screw is eliminated by new "Captive-Design" insert screw. Socket and pin assemblies utilize "wedge-action" to insure firm, reliable positioning in connector shell. Inserts are easily removable for wiring & soldering. High impact thermosetting plastic material insures long reliable insert assy. life. Female connectors have latch lock feature to hold conectors firmly together. Plugs and receptacle mechanically keyed for proper mating. "Q-G" (*) Series 3-,4-, 5-, 6-, and 7-pin/contact connectors offer 4-, 5-, 6-, 7-, & 8-pin contact versatility when "Ground-Terminal" is used. Used interchangeably with Switchcraft QGP connectors (page 41): 3- and 4-contact (Amphenol 91-850 and Excellite 91-450 Series, and Cannon XLR-3, XLR-4): 5-contact (Cannon XLR-5 and Amphenol Excellite 91-450 Series). Cord plug part no. suffix "L" indicates strain relief accepts cables from .25 in. (6.35 mm) to .328 in. (8.33 mm) dia.; other plugs accept cables up to .25 in. (6.35 mm) dia. (*) Number of insert contacts or pins must be specified to complete part number. Part number with suffix "B" indicates cord plug with "Black-Velvet" black finish (minimizes glare and permits stable "through-connector" shielding). Suffix "D" indicates type with "FAS-DISCONNECT" detent feature U.S. Patent 3,219,961; Canadian Patent No. 761, 114 (June 13, 1967)

RIGHT ANGLE PHONE JACKS

Monaural (2-cond.) and stereo (3-cond.) right angle PC mount jacks have new bifurcated terminals which provide distinct advantages:

1. Snap-in positive retention of jack in PC board during wavesoldering.
2. Bifurcated terminals permit additional solder flow path.
3. Added strength between panel/chassis and PCB during soldering by "wicking" solder through PC board and up sides of terminals.
4. Improved tip design facilitates positive mechanical retention and electrical contact of differing mating plug tip shapes (industry standard commercial plugs and other ¼ in. phone plugs).

Telecom Applications:

Many Trompeter products were developed specifically for the telecom industry.

BNC Miniature Coax 75Ω Wrench Crimp cable connectors (U20 Series): Typically withstands 100-110 lbs. pull! **75Ω Tool Crimp** (U220 Series): Typically withstands 70-90 lbs. pull and exceeds MIL-C-39012B, category "D" requirements. Both series accommodate many industry standard cables made by AT&T, Comm/Scope, etc. (AT&T 728, 734A and 735).

Standard and Miniature 75Ω Coax Patching Products: Plugs, jacks , panels, patch cords and cable assemblies.

DSX Modules: Rugged, dependable DSX modules meet or exceed the highest government and industry standards. Designed for accessing and cross-connecting DS4, DS-4E and DS-3 transmissions. Dimensionally equivalent replacement for the ADC DSX-4M (Rear cross-connect).

Custom Panels: Trompeter has manufactured custom distribution panels with BNC connectors for DS3 data transmission rates (45 megabits) which are used in distribution systems related to DSX applications.

Broadcast Applications:

Even with the advent of highly sophisticated digital switching equipment, Trompeter patching products still provide for the practical and affordable re-routing of RF and Video signals.

Custom panels with our 75Ω miniature patching for **high-density low VSWR** applications (Electronic News Gathering (ENG) and remote broadcast vans and trailers, etc.) have been developed to meet the industry's need for quality high-density RGBS patching.

50Ω & 75Ω Standard and Miniature Coax Patching: Normal-through jacks, paralleling jacks, panels, patch plugs, looping Plugs, patch cords and cable assemblies.

Audio Patching: Single and dual jacks, looping plugs and patch cords.

Cable Jacks & Plugs: (See Telecom applications)

Military Applications

***Military Twinax /Triax Applications*:** MIL-STD-1553B applications are found in **naval surface ships, battle tanks, helicopters, missiles, space vehicles, combat aircraft** and in many ground applications such as **data networks** and **perimeter security** for airports, armories, and other government installations. **Trompeter** provides matching components of Twinax/Twinax connectors and cable for improving the transmission capabilities and interference rejection of data transmission systems. Trompeter components will meet or exceed **MIL-STD-1553B** requirements for airborne and ground check-out **MIL-STD- 1760** "external stores". For detailed information on the features and benefits of each series see: **Twinax/Triax Connectors: Introduction** in our **free catalog.**

General Applications:

70 Series: Miniature Twinax/Triax (TRB/TRT): Used for digital data bus, video pair, airborne MIL-STD-1553B, base-band circuit and other "Noise Free Guarded" circuit applications. Used on larger military aircraft, naval surface ships, and on the Trident submarine.

150 Series: Subminiature Twinax/Triax (TRS/TTM): Used for digital data bus, video pair and airborne MIL-STD-1553B weight reduction, base-band circuit and other "Noise Free Guarded" circuit applications. Used on ASW/ Patrol, CAS/Attack, Tanker and all types of military aircraft.

70 Series: Concentric Miniature Patching and 150 Series: Concentric Subminiature Patching: Quick disconnect, high density connectors to quickly route/ program signals. Used in ground support applications.

80 Series: Standard Twinax/Triax (TRC/TRN): Standard "C" sized concentric connectors. Designed for ship-board data bus MIL-STD-1397.

30 Series: Miniature Connectors (TWBNC/TWTNC): 2-Pin polarized 2-lug/threaded connectors.

450 Series: Subminiature Twinax : Concentric connectors designed for airborne digital data bus weight reduction applications. Used on CAS/Attack, Stealth, Military transport and all types of military aircraft.

MIL-C-39029-90 /91 : Twinax Contacts for Digital Data Bus Multi-pin Connector. Mated pair of scoop- proof concentric contacts to fit the #8 cavity in multi-pin connectors such as the **MIL-C-38999 Series 1, 3, & 4,** and the **MIL-STD-1760 "external stores" type.** Fully QPL'd.

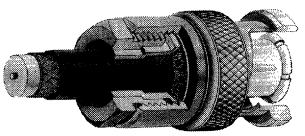
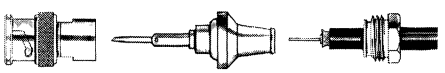
Quality is the Trompeter difference...

We connect you with Quality...

- Fully enclosed, heat treated beryllium copper outer conductor spring for positive electrical contact, improves EMI suppression
- "Pull to destruct force" approaching the tear strength of the cable itself
- 3-piece design for fast easy assembly
- Bayonet or Threaded Versions
- 50 ohm-75 ohm Versions

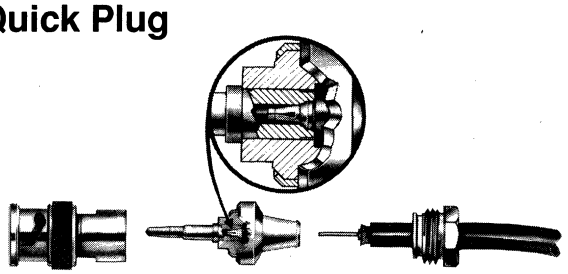
Wrench Crimp





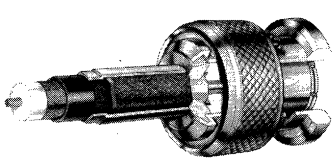
- No insulating material remaining between braid and clamping surfaces when fully assembled
- Holds TFE or similarly jacketed cable without the use of additional hardware
- Floating sleeve permits clamping of the braid without rotary movement
- Captive center contact does not rely on cable for positioning

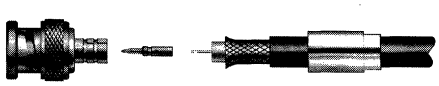
Quick Plug



- Wrench crimp design utilizing a solderless, scratch free center conductor retention clamp. (BNC & TNC cable plugs for RG-59,solid center conductor wire only)

Tool Crimp





- Meets MIL-C-39012B, Category "D" Requirements
- Stepped sleeve crimp provides strong attachment

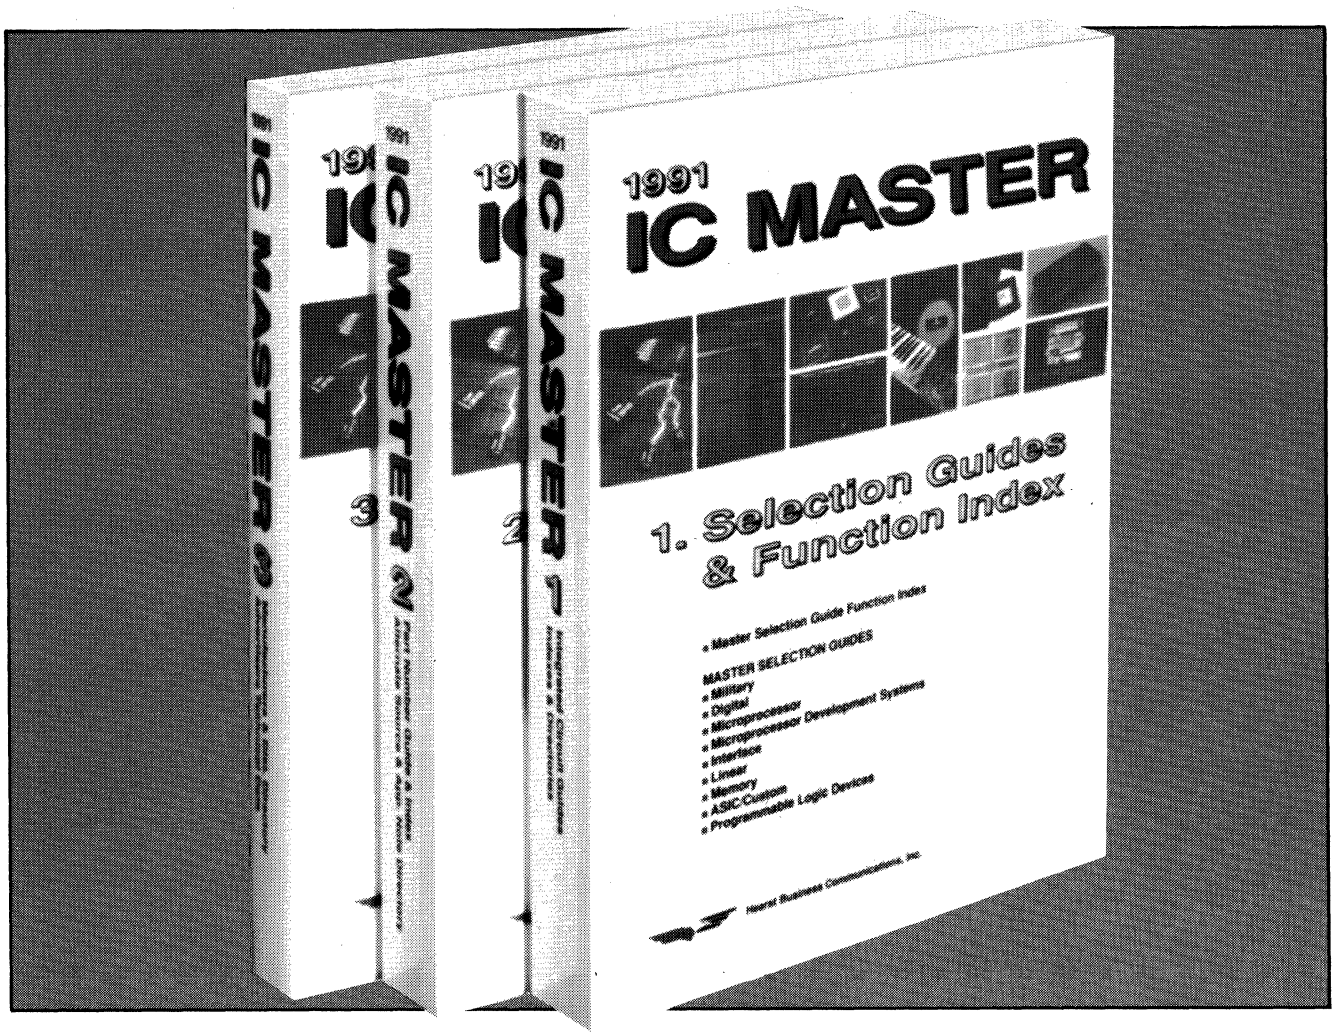
SUPER TIME SAVER!



Do you work with ICs? Do you have trouble finding the IC you need? Are you sick and tired of sifting through dozens of manufacturers' data books? Do you have trouble comparing one set of specs to another? Are you sick and tired of wasting time?

Do we have good news for you! Get your hands on the latest annual copy of the IC Master. The Master will save you both time and money. Here's how.

The Master lists every single IC you can buy. Better yet, the Master lists ICs by function. You know what you want to do. The Master tells you who makes what for what you want to do.

There's more! The Master lists every known alternate source to every integrated circuit. If somebody makes a substitute for an IC, the Master tells you. And fast!

Want to find a custom or semicustom IC? The Master tells you who the manufacturers are, what their capabilities are, and what design tools you need.

Looking for a distributor or a local sales office? The Master tells you where they are. Got a technical problem? The Master tells you who to call. Can't figure out a part number? The Master tells you how the part number systems work.

There's more! The Master has a section on microprocessor development tools with complete performance parameters. There's another section on programmable logic devices giving you everything from output configuration to PLD development systems.

Want to know if there's an application note available on a given part? The Master tells you!

If your question has anything to do with integrated circuits, you need the IC Master. Subscribe now by calling (516) 227-1314. Ask for Marie Botta. Tell Marie you need the Master now.

If you prefer, write to Marie, Hearst Business Communications, 645 Stewart Ave., Garden City, NY 11530. She'll mail you the IC Master subscription form right away.

And, if you tell her you saw it in the 1991/92 EEM, she'll take $10 off the subscription price!

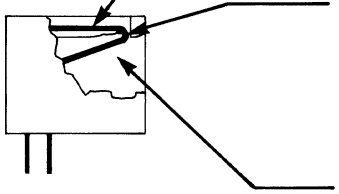
CONNECTORS (con't)

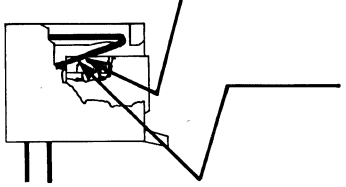
TRADITIONAL MODULAR FEMALE CONNECTORS



Spring contacts are phosphorbronze, offering only moderate contact life.

Contact fulcrum area located close to mating plug body means that contact can be easily damaged.

Spring contact on each outside position may be bent or overstressed if a handset plug is mated into a six or eight position female, or a six position plug is mated into an eight position female.



Contact force fluctuates up to 40 grams as plug moves around, while remaining mated with female.

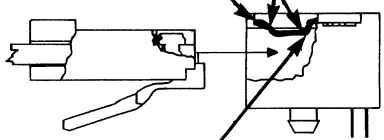
Impedance matching does not occur between spring contact and male contact, resulting in poor Voltage Standing Wave Ratio (VSWR) = 2.7.

Spring contact has only a single point of contact with male contact, causing rapid wear and plating loss.

VPC DT MODULAR FEMALE CONNECTORS

BERYLLIUM COPPER—THE BEST SPRING CONTACT MATERIAL—is used for all contacts to provide long life reliability after thousands of noting cycles.

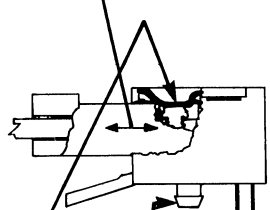
Contact free ends cannot hook/tear into finger tips because ends are in pockets.



Contact is preloaded, cantilever design for maintaining 100 grams typical contact force to assure high reliability.

Spring contacts eliminate the stress that can occur when incorrect plugs are inserted.

Contact force remains constant as plug is pushed or pulled while in a fully mated condition. Contact surfaces of spring contact and male contact are parallel and aligned with each other.



Large contact mating surface area provides
- Significantly improved impedance matching between spring contact and male contact, better Voltage Standing Wave Ratio (VSWR) = 1.7
- Multiple points of contact for connection redundancy, prevent interruption of signals
- Longer plating life because wear is not concentrated at one point while mated
- Higher current carrying capacity > 3.0 amps

Snap-lock feet with 360° wraparound lock ledges on both sides provide positive mechanical anchoring to .062 thick PCBs to prevent stress of soldered posts during plug insertion and removal.

General

Series 93 to 97 screw connectors for printed circuit boards are available with both metric and imperial center to center spacings and offer a choice of horizontal, vertical or 45 degree wire entry. All horizontal wire entry versions have standoffs at the base to allow flux and solvents to drain during flow soldering operations. Wire protectors prevent damage to finely stranded wires from the turning screw. Series 94 and 95 are available from 2 to 32 poles per strip and can be installed end to end while maintaining center to center spacing. T types feature a dovetail interlocking system and are available in 2 and 3 pole versions which can be combined to form larger configurations. Series 93 features captive screws.

TAB CONNECTORS FOR PRINTED CIRCUIT BOARDS
SERIES 900

WECO®

General
Series 900 tab type connectors offer the advantage of using receptacle equipped conductors for quick connecting and disconnecting to printed circuit boards. Instead of individually inserting the quick connect blades onto the printed circuit board, the 900 Series combines the required number of tabs into a strip. This eases the handling and cuts down on assembly time and cost. The quick connect blades come in various styles and types to meet your required plug-in direction. All quick connect blades feature double pin soldering and are tightly interlocked into the polyamide insulation housing. This ensures a reliable relief for the solder points when fitting and removing receptables.

HOW TO ORDER

General

These connectors with extra large clamping area have a lift-terminal which guarantees a high pressure fitting and a fatigue strength wire protection even after countless disconnections.

All types have captive screws and a dovetail interlocking system with 2 or 3 poles per strip. Blocks can be assembled to form required pole configurations.

Center to center spacing is 5mm/0.197in and 10mm/0.394in. All types have a test hole for a test plug with a diameter of 2.3mm/0.09in. All blocks are shipped unmarked as standard.

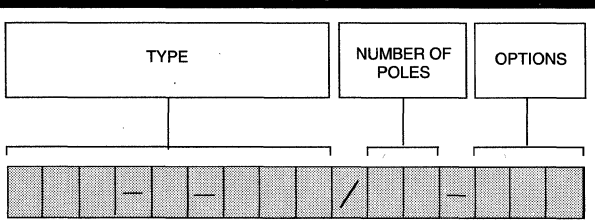
HOW TO ORDER



General

This design provides accessibility in tight spots, by arranging wire entrances in line with screw driver access. It does so in the horizontal or vertical direction, depending on the type. Reliable torque absorbtion of screw clamps is achieved by providing two exit pins per pole with center distances of 5.0 or 7.5 mm, and by the mechanical interlock features of the assembly. Connectors can be assembled in any desired length, preferably not exceeding 12 poles.

Beyond providing ease of systems service, the feed-through in-line feature provides designers with a component for dust protected systems by effectively reducing leakage to the environment.

The increasing importance of susceptibility to extraneous electro-magnetic interference (EMI), interstage coupling, or conversely, electromagnetic radiation, is also addressed by this connector design. Connections to the inner chassis or cabinet can be made through small holes in the chield, thereby maintaining its properties to the greatest extent, while permitting connecting service from the outside.

Technical Data

Center to center spacing:
Series 180: 5.00mm/0.197in (without spacers)
Series 182: 7.50mm/0.295in (with spacers)

Center to center spacing may be modified by inserting spacers of 2.5mm/0.098 in between individual connectors, thereby increasing the center to center pin distance to 7.5mm/0.295in. Special versions, or customer-assembled blocks may employ the spacer in any desired position to vary the pin spacing. The last individual connector in a block is closed by an end section.

Type 810
Each pole has 4 terminal points which can be operated independently. The stripped conductor is inserted up to the top of the terminal, where it is then clamped by the steel spring. To release the conductor from the clamp, insert a screwdriver through the appropriate opening and depress the spring clip.

General
All types are available from 1 to 12 poles. A mounting hole is provided between every circuit. The screws are captive and are backed-out and ready for wiring. Each circuit of the terminal strips has a wire protector to prevent damage to the wire from the turning screw. The wire protector is a thin steel or copper alloy plate placed between screw and wire. All metal parts of this terminal are completely recessed in the flexible polyamide moulding. This dead-front design ensures safety and prevents short circuiting. Its flexible construction allows use on uneven surfaces.

General

Plug and socket connectors are particularly suitable for installations where simple circuit closing and opening is required. By pre-wiring various equipment sections, it is possible to use plug and socket connectors to provide a quick and reliable connection at final assembly. Therefore wire confusion is avoided.

The screws are captive. Each screw connection can be equipped with a wire protector which avoids damage to the conductor from the turning screw.

Standard strip has 12 circuits and can easily be field cut to required number of poles or ordered as required. A mounting hole is provided between each circuit. The terminal screws are backed out and ready for wiring. The dead front design is for safety and avoids short circuitry.

General

Grounding Terminals are suitable for installation in apparatus, machinery and installation equipment of all types. They are used mainly in applications requiring a locked screw connection. WECO grounding terminals provide maximum operational reliability and meet the requirements of the corresponding VDE regulations.

The DF type mantle terminals consist of an upper cylindrical nut, and a lower, tapered and slotted bolt. A pressure pad travels up or down within that slot, depending on the direction of rotation. A small spring, situated between pressure pad and cylindrical nut, transmits contact pressure to the wire and thereby insures the integrity of the electrical connection despite vibration or temperature cycling effects. In addition, the spring and pressure pad provide a very effective friction lock to assure a durable and stable connection.

Notes on installation:
The above-specified terminals can be used for equipment of temperature classes T1 to T6 at ambient temperatures up to 40°C/104°F resulting from self-heating at the specified current. If the terminals are to be fitted as live parts in a terminal compartment – at least of enclosure IP 54 – the requirements in accordance with EN 50014-1977/VDE 0171, Part 1/5.78, Sections 14.2 to 14.4, must also be observed. In addition, the terminals must be locked at the base of the slotted bolt to prevent twisting.

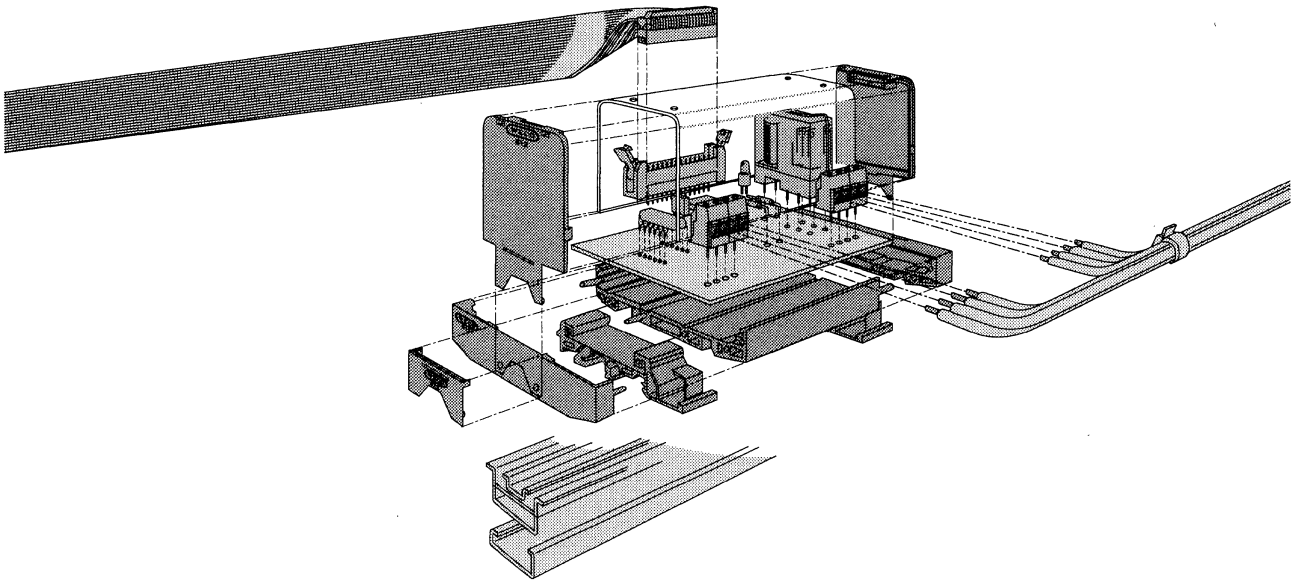
ELECTRONIC MODULES FOR MOUNTING RAILS TO DIN EN 50022, 50035 AND 50045

WECO®



Rail Mounted Modules

The most important criteria of today's large and complex production machinery is ease of design, cost effective maintenance and minimum down time.

Recognizing this, the industrial control and machine industry has tended towards greater centralization of components, test and disconnect points. Trouble shooters are more effective and safer if their area of activity is accessible and logically arranged. This, amongst other things, has resulted in rail mounted terminal blocks, which have proven to be very effective.

Grouping of terminal blocks and inclusions of diodes, fuses and switches came as the next step. Down time and cost of repair have benefitted considerably from the introduction of the more advanced rail mounted module.

One category serves as interface getween controller of microprocessor and power circuits, others serve as interface between two wiring systems. Other units carry components such as diodes, fuses, and varistors: or sub systems such as power supplies, opto couplers and relays.

Maintenance personnel are now able to identify problems in a central, well designated area without crawling around potentially dangerous machinery.

The modules listed below are suitable for all popular DIN rails as well as individual panel mounting by means of spacers.

HOW THEY WORK . . . These amazing letters, words and art patterns transfer to any clean surface. Just rub down with a ballpoint pen! Heat-resistant adhesive is safe for diazo copies.

MASTER ART QUALITY . . . Razor sharp edge definition makes DATAK transfers superb for original artwork or prototypes.

TAILOR-MADE COATINGS . . . Any old protective spray won't work over dry transfers. Our formulas flow evenly over the transfer and protect it perfectly on all classes of surfaces: glass, paper, wood, metal, plastics or paint.

TITLES and COMPONENT DESIGNATION SETS for ELECTRONIC EQUIPMENT

Newest **professional titles** have thousands of ⅛"(12 pt.) and 0.105"(10 pt.) words for both standard and micro-sized equipment control panels. Sets have 24 sheets, 3½"x 5". 12 point sets use bold face type, have one letter and one number sheet; 10 point sets are bold face titles and include 4 each, light and bold number and letter sheets. Letter and number sets have 12 identical sheets.

Component designation sets (TERMINAL and CHASSIS MARKING sets) include 24 sheets, 3½" x 5" of sequential numbers, letters and letter combinations conforming to ANSI Y32.16 and IEEE STD 200. This series is ⅛"size only. See JotDraft #JD192-JD251 for .085"through .250" designation numbers. Coat transfers for protection. See coatings section.

DATAKOAT™ PROTECTIVE COATINGS

DATAKOAT is a 100% acrylic high-solids water-clear coating for metals and plastics. It encapsulates dry transfers in a tough film. Its solvents will not attack most plastics, lacquers or cured enamels. The dry film has a high dielectric strength, is very flexible, moderately hard and extremely resistant to weathering and UV exposure. DATAKOAT is not recommended for transfers on paper.

04177 DATAKOAT Gloss Spray (12 oz. net wt.) **6.45**
04178 DATAKOAT Matte Spray (12 oz. net wt.) **6.45**

HARDKOAT™ PROTECTIVE COATINGS

HARDKOAT is a clear, very high-solids quality cellulosic resin for paper, wood and other porous surfaces. Its solvents fuse the dry transfer into the surface while its resins bond to the surface with an extremely hard, flexible film. HARDKOAT may be used on metals and many painted surfaces where it gives superior protection against abrasion and scratching. Its solvents temporarily soften many plastic materials, so it should be used with caution. Multiple heavy coats may have a very faint yellowish tint. Use DATAKOAT if an absolutely water-clear coating is essential.
